Fer·mat (fermæ), Pierre de (1601–65), French mathematician and founder of the modern theory of numbers. His 'last theorem', still lacking a general proof, stated that if *n*, *x*, *y* and *z* are integers, $x^n + y^n = z^n$ cannot be true if *n* is greater than 2. With Pascal he developed the theory of probability. He formulated the general principle (called Fermat's principle) concerning the behavior of light, stating that in traveling from one point to another a ray of light will take the path of minimum or maximum time as compared with adjacent arbitrary paths. The laws of reflection and refraction may be shown to be

fer·ma·ta (fərmätə) *n.* a pause [It]

fer·ment (fûrment) *n.* (under certain conditions) ‖ *v.t.* to cause fermentation in ‖ to inflame, excite, stir with unrest ‖ *v.i.*

fer·ment (fərment) *n.* any agent able to produce fermentation by enzyme action ‖ fermentation ‖ commotion, unrest [Latin] [F.]

fer·men·ta·tion (fɔrmənteiʃən) *n.* a chemical change produced by enzymes, particularly an energy-producing transformation of carbohydrate material yielding esp. alcohols, acids and carbon dioxide. The process of fermentation is widely used industrially in the production of alcoholic beverages and certain pharmaceuticals ‖ restless excitement. **fer·men·ta·tive** (fərməntətiv) *adj.* able to ferment or to cause to ferment [fr. L. *fermentatio* (*fermentationis*)]

Fer·mi (férmi), Enrico (1901–54), Italian physicist. He migrated to the U.S.A. (1939) and worked on the first controlled release of nuclear energy (1942). This led to the manufacture of the atomic bomb. Nobel prize for physics (1938)

fer·mi (fɔrmi) *n.* unit of length equal to 10⁻¹³ cm used in measuring nuclear distances

Fer·mi-Di·rac statistics (fermidirǽk) a quantum mechanical statistical system which analyzes the permitted distribution of particles among the allowed energy states of a system and which demonstrates that two identical fundamental particles having nonintegral spin quantum number cannot exist in the same energy state (cf. BOSE-EINSTEIN STATISTICS)

fer·mi·on (férmiɔn) *n.* (*phys.*) any fundamental particle having nonintegral spin quantum number (e.g. 1/2, 3/2, 5/2 etc.) and that obeys Fermi-Dirac statistics [after Enrico *Fermi*]

fer·mi·um (férmiəm) *n.* an artificial, radioactive element (symbol Fm, at. no. 100, mass of isotope of longest-known half-life 253) [after Enrico *Fermi*]

fern (fə:rn) *n.* a member of *Felicineae*, a class of vascular, nonflowering plants characterized by alternation of generations. The sporophyte is the conspicuous generation, possessing a vascular root and stem and large, pinnately compound fronds bearing sori on the margin or undersurface. Spores released by the sori give rise on germination to the gametophyte generation, consisting of a small flat thallus producing antheridia and archegonia. Fern species are numerous, grow in tropical and temperate zones, and exhibit wide variations in structure (* PTEROPSID) [O.E. *fearn*]

Fer·nán·dez de Li·zar·di (fernándesðeliːsurðiː), José Joaquín (1776–1827), Mexican novelist, known as 'El pensador mexicano'. His 'El Periquillo Sarniento' (1816), in the Spanish picaresque tradition, describes Mexican society shortly before independence and the longings of the mestizo for national and spiritual freedom. 'La Quijotita y su prima' (1818) treats of the education of women. The autobiographical 'Noches Tristes' (1818) introduced Romanticism to Mexico. 'Don Catrín de la Fachenda' (1832) presented a new picaresque type, the fallen aristocrat

fi·ber, fi·bre (faɪbər) *n.* a fine thread, *a fiber of wool*; a threadlike structure of animal or vegetable tissue; (*bot.*) an elongate cell typical of some sclerenchymas that is found in wood, leaves, phloem, cortex and dry fruits (cf. SCLEREID) ‖ a substance made of threads, *cotton fiber* ‖ a fibrous structure, *a textile of rough fiber* ‖ a substance, natural or man-made, that can be spun, woven, felted etc. ‖ a threadlike root for twig; moral strength [F.]
—The principal animal fibers are built up from long-chain protein molecules. They include silk, which is extruded by the larvae of moths, and a group including wool, hair and fur, which grow outwards from depressions (follicles) in the skin of animals. Vegetable fibers consist mainly of cellulose and lignin. They are isolated from the seeds and fruits (coir, cotton, kapok), stems (flax, hemp, jute) or leaves (manila hemp, sisal, raffia) of plants. Man-made fibers are of two kinds. Regenerated fibers such as rayons are made by dissolving a natural fibrous material and extruding it. Rayon was first produced at the end of the 19th c. and is now manufactured by three main processes (viscose, cellulose acetate and cuprammonium). Synthetic fibers are made by polymerizing comparatively simple chemical compounds. A major industry has resulted from the invention of nylon by the American chemist W. H. Carothers in 1937. Nylon is a generic term covering a range of fibers built up from amides which react at both ends to form long chains. The raw material, benzene, is readily obtained from coal tar or petroleum

fi·ber·board, *Br.* fi·bre·board (faɪbərbɔrd, faɪbərbourd) *n.* a material made by the compression of fibers, e.g. of wood, into sheets which may be sawn, nailed, etc. ‖ one of the boards so made

Flau·bert (flouber), Gustave (1821–80), French novelist. 'Madame Bovary' (1857) is the tale of a Romantic bourgeoise whose infidelities lead to her death. 'L'Education sentimentale' (1869) is an account of the aspirations and eventual failure of a conventionally Romantic young idealist student. Both are realist in that Romantic attitudes are shown in action in French 19th–c. bourgeois society, but they deal ambiguously with human life, with a disturbing irony. 'La Tentation de Saint Antoine' (1874) and 'Salammbô' (1862), with their fantasies of violence and eroticism, and 'Bouvard et Pécuchet', an uncompleted onslaught of pathological ferocity on the bourgeois mentality, also give insights into the turbulence of Flaubert's mind. Thus although Flaubert's work is usually regarded as the origin of realism in the modern world, it was anything but merely realistic. Stylistically he toiled for perfection, and his technical achievements were deeply influential: Henry James, Conrad and Joyce all acknowledged his influence

fluff·i·er *superl* **fluff·i·est** *adj.* of or like fluff [illegible]

flu·id (flu:ɪd) **1.** *n.* a substance (e.g. a liquid or gas) that under the influence of small forces flows and is capable of assuming the shape of its container (cf. SOLID, "KINETIC THEORY") **2.** *adj.* able to flow ‖ able or likely to change, *his opinions are fluid, a fluid situation* [F. *fluide*]

fluid dram a unit of liquid capacity equal to 1/8 fluid ounce (in U.S. measures = 0.225 cu. in., in Br. measures = 0.2167 cu. in.)

fluid drive the power coupling for a car etc., operating on a hydraulic turbine system: one set of turbine blades (impellers), driven in oil and connected to the flywheel of the engine, turns another set of turbine blades (runners) attached to the transmission gears

flu·id·ex·tract (flu:ɪdɛkstrækt) *n.* (*pharm.*) an alcoholic solution of a vegetable drug, one cubic centimeter of which corresponds in active ingredients to one gram of the dry drug

flu·id·ics (flu:ɪdɪks) *n.* the technology concerned with the use of the flow of fluids to accomplish sensing, computation, amplification and control functions [FLUID]

flu·id·i·fy (flu:ɪdɪfaɪ) *pres. part.* **flu·id·i·fy·ing** *past* and *past part.* **flu·id·i·fied** *v.t.* to make fluid ‖ *v.i.* to become fluid

flu·id·i·ty (flu:ɪdɪtɪ:) *n.* the state or quality of being fluid

fluid mechanics the mechanics of the properties of gases and liquids

fluid ounce a unit of liquid capacity equal to 1/16 pint (1.8047 cu. ins) in U.S. measures and to 1/20 imperial pint (1.7339 cu. ins) in Br. measures

fluke (flu:k) *n.* the triangular plate on the arm of an anchor which buries itself fast in the ground ‖ the barb or barbed head of a harpoon, arrow or lance ‖ (*pl.*) the lobe of a whale's tail [perh. FLUKE, flatfish]

fluke *n.* a flatworm of class *Trematoda*, having a complicated life cycle in which the larvae are parasitic on invertebrates and the adults on vertebrates (*LIVER FLUKE) ‖ a flatfish, esp. a flounder [O.E. *flōc*]

fluke **1.** *n.* a stroke of luck, an accidentally successful or lucky stroke, esp. at billiards **2.** *v. pres. part.* **fluk·ing** *past* and *past part.* **fluked** *v.t.* to make a fluke, esp. at billiards ‖ *v.t.* to get by a fluke, *he fluked his way into the championship* [origin unknown]

fluk·i·cide (flu:kɪsaɪd) *n.* a substance that kills flukes

fluk·y, fluk·ey (flu:kɪ:) *comp.* **fluk·i·er** *superl.* **fluk·i·est** *adj.* infested with flukes

fluk·y (flu:kɪ:) *comp.* **fluk·i·er** *superl.* **fluk·i·est** *adj.* lucky, done or won by luck ‖ (of a breeze) light and veering often

flume (flu:m) **1.** *n.* a sloped artificial channel made to convey water over some distance for irrigation, or to a mill or ore-washing plant etc., or to transport logs, etc. ‖ a gorge containing a stream **2.** *v.t. pres. part.* **flum·ing** *past* and *past part.* **flumed** to convey (water or logs etc.) down a flume [M.E. *flum, flun* fr. O.F.]

flum·mer·y (flʌmərɪ:) *pl.* **flum·mer·ies** *n.* hocus-pocus, humbug ‖ empty compliments ‖ any of various desserts made of milk, flour, eggs etc. [Welsh *llymru*, a kind of food]

flum·mox (flʌməks) *v.t.* (*pop.*) to baffle, disconcert, perplex [origin unknown]

flung *past* and *past part.* of FLING

flunk (flʌŋk) *v.t.* (*pop.*) to fail (esp. an examination) ‖ (*pop.*) to fail (someone) in an examination **to flunk out** (*pop.*) to be dismissed, esp. from college, for failure [perh. rel. to FUNK]

flun·key, flun·ky (flʌŋkɪ:) *pl.* **flun·keys, flun·kies,** *n.* a liveried servant, footman ‖ a toady ‖ a subordinate [etym. doubtful]

flu·o·cin·o·lone acetonide ($C_{24}H_{30}F_2O_6$) (flu:ousɪnoulouən) *n.* (*pharm.*) anti-inflammatory, anti-itching salve; marketed as Synalor

fluo·cin·o·nide ($C_{26}H_{32}F_2O_6$) (flu:ousɪnounaɪd) *n.* (*pharm.*) glue corticosteroid anti-inflammatory, anti-itching, vasconstrictor drug; mar[illegible] [des F.]

flu·o·ra·cet·a·mide (fluərəsɛtəmaɪd) *n.* (*chem.*) fluoracetic acid, a pesticide used in Great Britain

fluo·resce (flures, flɔres, flourés) *pres. part.* **fluo·resc·ing** *past* and *past part.* **fluo·resced** *v.t.* to show fluorescence

fluorescein (flu:ərɛsɪ:n, flɔrɛsɪ:n, flourɛsɪ:n) *n.* a yellowish-red crystalline dye, $C_{20}H_{12}O_5$, that is widely used as an indicator or tracer since it gives a green fluorescence under ultraviolet light, even in extreme dilution. It is also an intermediate for the synthesis of other dyes [illegible]

flu·o·res·cein (fluərɛsɪ:n) *n.* (*med.*) fluorescent fluorene dye used intravenously to gauge circulation and lesions in retina, optic nerve, iris, and choroid

fluo·rescence (flʊəˈres·ns, flɔːˈres·ns, flɒˈres·ns, flʊˈres·ns) *n.* (*phys.*) a luminescence which may or may not persist after removal of the excitation but whose decay does not depend on temperature (cf. PHOSPHORESCENCE) ‖ the property of emitting such radiation ‖ the radiation so emitted often in the visible region **fluo·rés·cent** *adj.* [FLUORSPAR after *opalescence*]

fluorescent lamp a tubular glass electric lamp containing mercury vapor and equipped with an electron gun and anode, whose inner surface is coated with fluorescent substances. These give off visible light when subjected to ultraviolet radiation, produced when the mercury vapor is bombarded by a stream of electrons

fluorescent microscope an ultraviolet microscope

fluor·i·date (flʊərɪdeɪt, flɔrɪdeɪt, flɒrɪdeɪt, flʊrɪdeɪt) *pres. part.* **fluor·i·dat·ing** *past* and *past part* **fluor·i·dat·ed** *v.t.* to subject to fluoridation [back-formation fr. FLUORIDATION]

fluor·i·da·tion (flʊərɪdeɪʃən, flɔrɪdeɪʃən, flɒrɪdeɪʃən, flʊrɪdeɪʃən) *n.* the addition of fluorides to drinking water) so as to combat tooth decay [FLUORIDE]

fluo·ride (flʊəraɪd, flɔraɪd, flɒraɪd, flʊraɪd) *n.* a binary compound of fluorine ‖ a salt or ester of hydrofluoric acid [fr. Mod. L. *fluor*, mineral of group incl. fluorspar]

fluo·ri·dize (flʊərɪdaɪz, flɔrɪdaɪz, flɒrɪdaɪz, flʊrɪdaɪz) *n.* compound of fluorine used as liquid repellant textile finish or to prevent dental caries **fluoridize** *v.*

fluo·rine (flʊəriːn, flɔriːn, flɒriːn, flʊriːn) *n.* a nonmetallic toxic monovalent element of the halogen group (symbol **F**, at. no. 9, at. mass 18.9984) It is normally a yellowish gas. It is highly reactive and a most powerful oxidizing agent [F. fr. Mod. L. *fluor*, mineral of group incl. fluorspar]

fluo·rite (flʊəraɪt, flɔraɪt, flɒraɪt, flʊraɪt) *n.* fluorspar [Ital.]

fluo·ro·car·bon (flʊərəʊkɑːbən, flɔrəʊkɑːbən, flɒrəʊkɑːbən, flʊrəʊkɑːbən) *n.* a gas used as a propellant in aerosols, thought to be modifying the ozone layer in the stratosphere, thereby allowing more harmful solar radiation to reach the earth's surface

fluo·ro·plas·tic (flʊərəplæstɪk, flɔrəplæstɪk, flɒrəplæstɪk, flʊrəplæstɪk) *n.* any of various fluorine plastics suitable for molding or coating

fluo·ro·sis (flʊˈrəʊsɪs, flɔˈrəʊsɪs, flɒˈrəʊsɪs, flʊˈrəʊsɪs) *n.* an abnormal condition produced by a greatly excessive intake of fluorine, e.g. spotting of tooth enamel through excessive fluorine in drinking water [Mod. L.]

fluo·ro·u·ra·cil (flʊərəʊjʊərəsɪl, flɔrəʊjʊərəsɪl, flɒrəʊjʊərəsɪl, flʊrəʊjʊərəsɪl) *n.* (*pharm.*) a fluorine pyramidine drug used in cancer chemotherapy; marketed as Etudex

fluo·r·spar (flʊːərspɑr, flɔːrspɑr, flɒːrspɑr, flʊːrspɑr) *n.* native calcium fluoride, occurring in cubic crystals which are either colorless or colored by impurities. It is a source of fluorine compounds [fr. L. *fluor*, flux + SPAR (mineral)]

flur·ry (flʌriː, flʌri) **1.** *pl.* **flur·ries** *n.* a sharp sudden gust of wind ‖ a sudden gusty shower of rain or snow ‖ a fit of nervous excitement, *a flurry of alarm* ‖ the struggles of a dying whale **2.** *v.t. pres. part.* **flur·ry·ing** *past* and *past part.* **flur·ried** to fluster, esp. by causing to hasten, divide attention, etc. [imit.]

flush (flʌʃ) **1.** *v.t.* to startle (a game bird) and cause it to fly up ‖ *v.i.* (of a game bird) to start up suddenly, fly up **2.** *n.* a number of game birds flushed at once [perh. imit.]

France (fræns, frɑns) a republic (area 212,822 sq. miles incl. Corsica, pop. 54,174,000) in W Europe. Capital: Paris. Religion: mainly Roman Catholic, 2% Protestant, 230,000 Jewish. The land is 34% arable, 23% pasture, 20% forest and 3% vineyards. It consists of lowland basins separated by mountains. The Paris basin, the Aquitaine basin, the plains of Languedoc and the Saône-Rhone depression form (counterclockwise) a circle around the Massif Central. The frontier lowlands of Alsace and Flanders are joined respectively to the Paris basin by the Belfort gap and hills of Artois. The mountainous regions are (clockwise): the Ardennes (2,000 ft), the Vosges (4,667 ft), the Jura (5,642 ft), the Alps (Mont Blanc, 15,781 ft), the Pyrenees (11,000 ft) and the Armorican Massif (1,000 ft). The granite plateau of the Massif Central rises to 6,188 ft (Puy de Sancy) and 5,753 ft (Mezenc) in the Cevennes. Annual rainfall: Brest 32 ins, Paris 22 ins, Strasbourg 26 ins, Clermont-Ferrand 25 ins, Bordeaux 30 ins, Marseille 23 ins. Average winter and summer temperatures (F.): Brest 45° and 63°, Paris 36° and 65°, Strasbourg 31° and 66°, Clermont-Ferrand 35° and 66°, Bordeaux 41° and 68°, Marseille 43° and 72°. Livestock: cattle, sheep, hogs, horses. Agricultural products: cereals (esp. wheat in the Beauce), sugar beet, vegetables, fruit, silk, rice, olive oil, lumber. France produces one third of the world's wine (notably in the Midi, Champagne, Bourgogne and around Bordeaux). Resources: iron, coal, oil, lignite, bauxite, potash, fish, hydroelectricity. Main industries: iron and steel, sugar, textiles, chemicals, vehicles, ships, plastics, leather, foodstuffs, printing, aircraft, oil refining, light manufactures, tourism. Exports: machinery, vehicles, textiles, wine and liqueurs, luxury goods, notably tapestries, perfumes, porcelain, glass and crystal ware, furniture, clothes (haute couture), jewelry. Imports: coal, oil, machinery, textiles, iron and steel. Ports: Marseille, Le Havre, Rouen, Dunkerque. The Midi canal (built 1631) links the Atlantic and the Mediterranean. There are 19 universities, the oldest being Paris (1215) and Toulouse (1230). Monetary unit: franc (100 centimes). Overseas departments: Martinique, Guadeloupe, Reunion, French Guiana. Overseas territories: French Polynesia, New Caledonia, French Somaliland, St Pierre and Miquelon, French Southern and Antarctic Territories, Wallis and Futuna. Franco-British condominium: New Hebrides. HISTORY. Caves in S.W. France show signs of occupation by Cro-Magnon and other [illegible]. The earliest settlers were of Ligurian and Iberian stock, and trading colonies were founded along the Mediterranean coast by Phoenicians and Greeks. The Gauls, a Celtic people, settled (6th c. B.C.), and were divided into many tribes when Rome made the south the province of Transalpine Gaul (121 B.C.). The whole of Gaul was conquered (58 B.C.–51 B.C.) by Julius Caesar, and Christianity was introduced (1st c. A.D.). The Gallo-Roman civilization which developed was to have a permanent influence on French language and institutions. The country was invaded (3rd–5th c.) by Germanic tribes, the Burgundians and the Visigoths settling in the south, and the Franks in the north. These united under Aetius to defeat (451) the Huns under Attila. The Franks were ruled (448–751) by the Merovingian dynasty. Charlemagne extended his rule (481–511) over the whole country, and was converted (c. 496) to Christianity. On his death his kingdom was divided and, during wars between the kings of Austrasia and Neustria, power passed to the mayors of the palace. One of these, Charles Martel, halted the Moorish invasion of Europe at Poitiers (732). His son, Pepin III, founded the Carolingian dynasty (751–987) and was succeeded by Charlemagne, in whose reign (768–814) a strong administration was built up and the arts flourished. He subdued the Lombards, Bavarians, Saxons and Avars, and was crowned Emperor (800) by the pope. His vast empire was divided by the Treaty of Verdun (843) into three parts, one of which, the kingdom of the W. Franks, later evolved into France. The power of the Carolingians declined as a powerful feudal nobility developed, and as the north coast was raided by Vikings, to whom Normandy was ceded (911). Hugh Capet [illegible] founded the Capetian dynasty (987–1328). The early Capetians exercised little authority beyond a small area around Paris, but Louis VI strengthened royal power and extended the royal domain during his reign (1108–37). The towns prospered and commerce developed. The marriage (1152) of Henry II of England to Eleanor of Aquitaine, the divorced wife of Louis VII, gave a large part of France to England, but in the reign of Philippe II (1180–1223) it was all regained except Gascony (1204). By his victory at Bouvines (1214) Philippe II made France a dominant military power. France took a leading part in the Crusades, the Sorbonne became a center of theological learning, magnificent Gothic cathedrals were begun and, in the reign (1226–70) of Louis IX high ideals of kingship and justice were established. In the reign (1285–1314) of Philippe IV, the first States General was summoned (1302), the power of the feudal nobility was crushed, royal authority was asserted over the Church, and the papacy was induced to reside at Avignon (1309–78). The direct male line of Capetians died out (1328) and the throne passed to a younger branch, the house of Valois, whose claim was disputed by Edward III of England. In the ensuing Hundred Years' War (1337–1453) France was defeated at Crecy (1346) and Poitiers (1356), was ravaged by the Black Death, was humiliated in the Treaty of Bretigny (1360), and lost her position as the cultural center of Europe. Under Charles V, Bertrand du Guesclin regained (1369–73) all the lost territory except Calais and Gascony, but civil war broke out (1407). Henry V of England renewed the war (1415), and France was again humiliated at Agincourt (1415) and by the Treaty of Troyes (1420). The French cause was revived by Joan of Arc who, after a brilliant campaign, had the dauphin crowned (1429) as Charles VII. By 1453 Calais was the only English possession in France. In the reign (1461–83) of Louis XI, the power of the dukes of Burgundy was crushed, and the royal domain was extended to contain what is nearly all of present-day France except Brittany, which was added in 1491. The latter involved France in the costly Italian Wars (1494–1559), the first phase of a struggle with the Hapsburgs which was to last more than two centuries. François I's reign (1515–47) saw the beginnings of the Renaissance in France and of colonial expansion. The growing absolutism of the court and the increasing numbers of Huguenots precipitated the Wars of Religion, in which Catherine de' Medici, the Guises and the Holy League tried to prevent the succession of the Protestant Henri de Navarre. The latter succeeded as Henri IV on the death (1589) of Henri III, the last of the Valois, but was not recognized as king by the Holy League until he abjured Calvinism (1593). Under Henri IV, the first of the Bourbons, religious toleration was guaranteed in the Edict of Nantes (1598), and prosperity was restored by Sully. During the reign (1610–43) of Louis XIII and the first part (1643–61) of that of Louis XIV, French policy was dictated first by Richelieu and then by Mazarin. France allied herself victoriously

with the Protestant powers against the Hapsburgs in the Thirty Years' War (1618–48). The Huguenots were crushed, the Fronde was defeated and, with the growth of the theory of divine right, royal absolutism reached its height under Louis XIV. Religious toleration ended with the revocation (1685) of the Edict of Nantes, and Jansenism was put down. A brilliant court developed at Versailles, and French classicism, language and manners influenced the whole of Europe. Despite the work of Colbert and Louvois, France was weakened financially by a series of wars: the War of Devolution (1667–8), the Dutch War (1672–8), the War of the Grand Alliance (1689–97) and the War of the Spanish Succession (1701–14). French expansion was halted by the Peace of Utrecht (1713). In the reign (1715–74) of Louis XV, the growing financial crisis was alleviated by Fleury, but the War of the Austrian Succession (1740–8) and the Seven Years' War (1756–63) resulted in the loss of Canada and of most possessions in India. The Encyclopedists and the physiocrats in vain demanded political, social and economic reform of the ancien régime. Turgot attempted reform, but was dismissed (1776) by Louis XVI. Necker was unable to persuade the nobles to abandon their fiscal privileges and, faced with national bankruptcy, advised the summoning of the States General for the first time since 1614. The French Revolution broke out (1789). Louis XVI was executed (1793), the First Republic was established, and the French Revolutionary Wars began (1792–1802). The Directory was set up (1795) and overthrown (1799) by Napoleon, who established the Consulate (1799) and the First Empire (1804). The Napoleonic Code was instituted (1804). The Napoleonic Wars (1803–15) spread French domination throughout the continent of Europe, but Napoleon suffered reverses in the Peninsular War (1808–14) and in the retreat from Moscow (1812). He abdicated (1814) and was exiled to Elba, the monarchy being restored with Louis XVIII. Napoleon returned to France (1815), but, after the Hundred Days (Mar.–June 1815), was defeated by the Allies at Waterloo, and was exiled to St Helena. The Congress of Vienna restored Louis XVIII, and reduced France to her frontiers of 1789. During the reign (1814–24) of Louis XVIII and that (1824–30) of Charles X, the severe limitation of the franchise and the reactionary policy of the government provoked a liberal revolution in Paris (July 27–9, 1830). Charles fled and was replaced by the duc d'Orléans, who was proclaimed king of the French as Louis Philippe. His rule (1830–48) developed into a plutocracy under the guidance of Guizot. The conquest of Algeria was begun, but failed to deflect attention from corruption at home. An economic crisis (1847) was followed by a proletarian revolution (Feb. 22–4, 1848), in which Louis Philippe abdicated. An attempt to put Louis Blanc's socialism into practice was unsuccessful. Louis Napoleon was proclaimed (1848) president of the Second Republic. A coup d'état (Dec. 2, 1851) established the Second Empire, Louis Napoleon becoming emperor (1852) as Napoleon III. His dictatorship was modified after 1859 by liberal reforms, and the beginnings of industrialization brought pros-

gained Nice and Savoy (1860) after a brief intervention in Italy, and sent a disastrous expedition to Mexico (1861–7). Napoleon III's regime collapsed when Prussia invaded during the Franco-Prussian War (1870–1), after which France lost Alsace-Lorraine. The insurrection

The 1st world war cost France 1,400,000 dead, and exhausted her economy, but by the Treaty of Versailles (1919) she regained Alsace-Lorraine. Germany refused to pay reparations, and Poincaré sent French troops to occupy the Ruhr (1923–5). The succeeding years were marked by inflation, economic depression (1932) and political instability until Léon Blum formed (1936) a Popular Front government. In the face of the rise of Hitler in Germany, France allied herself with the Little Entente and built the Maginot line. But she remained inactive when Hitler occupied the Rhineland (1936), and she adopted the policy of appeasement at Munich (1938). France declared war (Sept. 3, 1939) when Germany invaded Poland. The Germans invaded France (May 1940) and quickly reached Paris. The government, retreating to Vichy, appointed Pétain as premier, signed an armistice (June 22, 1940) and suspended the constitution. The Germans occupied N. France (1940) and then the rest of the country (Nov. 1942). De Gaulle escaped to London, organized the Free French, and established a provisional government in Algiers (1943). After the Allied invasion of Normandy (June 1944) and the liberation of Paris (Aug. 25, 1944), de Gaulle governed France until the constitution of the Fourth Republic was drawn up (1946). France joined the Organization for European Economic Cooperation (1947), NATO (1949) and the European Economic Community (1957). Postwar reconstruction was hampered by government instability and by war in Indochina (1946–54) and Algeria (1954–62). The Algerian crisis of 1958 restored de Gaulle to power. A new constitution, giving the president greater power, established the Fifth Republic (1958) and the French Community (1959). De Gaulle was elected president (1959). The war in Algeria ended (1962) with the grant of independence. A treaty of cooperation was signed (1963) with West Germany. France created an atomic striking force and pursued a policy of independence in foreign affairs. De Gaulle resigned (Apr. 1969). Georges Pompidou was elected (June 1969) president, followed by Valéry Giscard d'Estaing and François Mitterrand (1981–), a Socialist. He was forced to curtail his social welfare policies because of a deteriorating economy (1982–3). Unrest in New Caledonia and a scandal over French involvement in the sabotaging of a ship belonging to an anti-nuclear group (1985) also marked his presidency.

France (frɑ̃s), Anatole (Jacques Anatole Thibault, 1844–1924), French novelist and critic. His works have a penetrating irony, reflecting a pervading cynicism in politics and religion. He wrote an elegant, classical French. His works include 'le Crime de Sylvestre Bonnard' (1881), 'Les dieux ont soif' (1912), 'l'Ile des pingouins' (1908).

Franck (frɔk), César Auguste (1822–90), naturalized French composer, organist and teacher, of Belgian birth. He wrote many organ works and many songs, but is chiefly known for certain deep, passionate works written well after he was 50: the 'Symphonic Variations for Piano and Orchestra' (1885), 'Symphony in D minor' (1886–8), 'Sonata for Piano and Violin' (1886), 'String Quartet in D major' (1886–8) and three chorales for the organ (1890). His rich chromatic harmony and melodic purity influenced many modern composers.

Fran·co (frænkou), Francisco (1892–1975), Spanish general and head of state. He organized the revolt in Morocco (July 1936) which precipitated the Spanish Civil War (1936–9), and was proclaimed commander in chief (1936) and 'El Caudillo' (1937) of the Falangists. In 1939 he became dictator. He was named regent of Spain for life (1947). The Cortes approved (1969) his proposal that on his death or retirement Prince Juan Carlos of Bourbon should become king of Spain, which he did in 1975 as

Fran·çois I (frɑ̃swæ) (1494–1547), king of France (1515–47), cousin of Louis XII. Most of his reign was occupied in attempts to conquer Italy and in rivalry with the Emperor Charles V. Unable to gain the support of Henry VIII of England (1520), he challenged the power of the Hapsburgs in four Italian Wars (1521–5, 1527–9, 1536, 1542). He finally abandoned his claims to Italy (1544) and made peace with England (1546). Under his patronage of the arts, the French Renaissance reached its height.

French Language French belongs to the Italic (Romanic) group of the Indo-European family of languages. It developed from the vernacular Latin of the Roman Empire. The French language had a strong influence in W. Europe during the Middle Ages and in the 18th c. For three centuries (following the Norman Conquest) it was the official language of the English court and has had a profound effect on modern English. French borrowed heavily from Italian during the Renaissance and has also many Germanic borrowings. In the 18th c. it was the universal language of European culture. Historically, French is divided into three periods: Old French, before the 14th c., Middle French, 14th–16th cc., and Modern French, from the 16th c. to the present day. It is spoken in France by about 46,500,000, in Belgium by about 3,500,000, in Switzerland by about 1,100,000 speakers, in Canada by about 6,000,000, in Haiti by about 3,500,000, and in other French-speaking countries by about 41,000,000 speakers, in all about 100 million

(MOTU ARCHIPELAGO, SOCIETY ISLANDS)

French Revolution cal and social upheavals in France (1789–99), which overthrew the French monarchy and

Its causes lay in the many defects of the ancien regime: political power was monopolized by a privileged nobility, the peasants were depressed by the continuance of the feudal system and inefficient agricultural methods, the state was bankrupt after a long series of wars, and there was rapid inflation. Calonne and Necker tried to reform the antiquated fiscal system (1787–8), but failed when the nobles refused to abandon their privileges. Louis XVI was persuaded to summon the States General for the first time since 1614, but when these met at Versailles (May 5, 1789), the third estate, inspired by the example of the Revolutionary War and by the writings of 18th–c. philosophers (notably Rousseau and Montesquieu), refused to submit to the nobility and upper clergy. Led by Sieyes and Mirabeau, they took the Tennis Court Oath (June 20, 1789), declared themselves to be the National Assembly, and invited the other estates to join them. The king summoned troops to Versailles, and this, together with adverse economic conditions, provoked insurrection in Paris, where the Bastille was stormed (July 14, 1789). Riots followed in towns throughout France, and the National Guard was established under Lafayette. Rural rioting spread panic in the countryside and prompted the deputies at Versailles to vote the abolition of feudalism (Aug. 4, 1789) and to vote the Declaration of the Rights of Man (Aug. 26, 1789). A Paris mob marched to Versailles (Oct. 5, 1789) and ordered the royal family to move to Paris. The Assembly followed (Oct. 15, 1789), and from then on Paris dominated the course of the revolution. The next 18 months were spent in constitutional debate, in the course of which the old provinces of France were replaced by 83 departments, and the Civil Constitution of the Clergy was voted (July 12, 1790). Church land was nationalized and sold, the proceeds forming the security for the assignats. The constitution of 1791 established a limited monarchy and a restricted franchise. Republicanism grew after the royal family had attempted to escape from Paris (June 20, 1791) and were recaptured at Varennes in N.E. France. The Legislative Assembly, which began work Oct. 1, 1791, was suspicious of plots between French émigrés, Marie Antoinette and the Austrian court, and declared war on Austria (Apr. 20, 1792), thus beginning the French Revolutionary Wars. Early reverses in the war led the mob to storm the Tuileries (Aug. 10, 1792) and to commit the September massacres (Sept. 2–6, 1792) in prisons in Paris and the provinces. The Paris Commune, led by Marat, increased its power, and the Legislative Assembly was replaced by the Convention, which abolished the monarchy (Sept. 21, 1792). Political power passed to the Girondists and the king was executed (Jan. 21, 1793). This brought Britain, Holland and Spain into the war against France. Amid military defeats, the treason of Dumouriez and revolt in the Vendee, the extremists of the Mountain organized an armed insurrection (June 2, 1793) which purged the Convention of Girondists and established the emergency government of the Committee of Public Safety. Many Girondists were executed (Oct. 31, 1793). The new government, dominated by Robespierre, represented the dictatorship of the Mountain, and was reinforced by the mass executions of the Terror. With the execution (Mar.–Apr. 1794) of Hébert and Danton and their followers, Robespierre's rule became even more extremist. Maximum wages and prices were fixed. Christianity was replaced by the Cult of the Supreme Being as the official religion. The Convention overthrew Robespierre on 9 Thermidor (July 27, 1794) and a reaction set in. A new constitution was voted (Aug. 22, 1795), and the Vendemiaire insurrection in Paris (Oct. 5, 1795) was put down by Barras and Napoleon Bonaparte. The period of the Directory (1795–9) was marked by economic crises at home and the growth of Napoleon's reputation as a military leader abroad. The Directory was overthrown (Nov. 9, 1799) by the coup d'etat of Brumaire, which transferred power to three consuls, Napoleon emerging as the dominant one. Within France, the Revolution had begun to give political power to the bourgeoisie and to distribute land to the peasantry. Its ideals of liberty, equality and fraternity remained as an inspiration to European

French Revolutionary Wars the wars (1792–1802) in which revolutionary France fought two coalitions of European powers. After the Declaration of Pillnitz (1791) France declared war on Austria (1792). The first coalition was formed (1792) by Austria and Prussia, and was joined by Sardinia (1792) and by Britain, Spain and the Netherlands (1793). Dumouriez won early successes for France at Valmy and Jemappes (1792) France suffered reverses (1793), but Carnot organized a war effort which sent French armies into the Low Countries and many German and Italian states. Prussia, the Netherlands and Spain made peace (1795) with France. As a result of Napoleon's brilliant campaign in Italy (1796–7), Sardinia made peace (1796) and Austria submitted to the Treaty of Campo-Formio (1797). Britain maintained her naval supremacy in the Atlantic and the Mediterranean, and Nelson's victory at the Nile (1798) temporarily isolated Napoleon in Egypt. The second coalition, organized (1798) by Pitt, included Britain, Russia, Austria, Naples, Portugal and Turkey. Russia withdrew (1799). Napoleon's return to Europe (1799) was followed by overwhelming French victories at Marengo and Hohenlinden (1800). Turkey submitted (1800), followed by Austria, Naples and Portugal (1801). Britain made peace with France at Amiens (1802), but the struggle was resumed (1803) in the Napoleonic Wars. The French Revolutionary Wars saw the spread of French influence and of the ideas of the French Revolution over much of Europe. Republics were established in parts of Italy, Switzerland and the Netherlands and Napoleon emerged as the military and political leader of France

Freud, Sigmund (1856–1939), Austrian psychiatrist, founder of psychoanalysis. Studying under J. M. Charcot, Paris (1885–6), and in collaboration with Josef Breuer, Vienna, Freud used hypnosis in the treatment of hysteria. He abandoned this for a method of free association and dream analysis which he called psychoanalysis. At first he placed great emphasis on the role of the unconscious in personality development and discovered the importance of infantile sexuality and the Oedipus complex. Main works of this period are: 'The Interpretation of Dreams' (1900), 'The Psychopathology of Everyday Life' (1901) and 'Three Contributions to the Sexual Theory' (1905). In 'Beyond the Pleasure Principle' (1920) Freud outlined the two dominant principles of the mind as the pleasure–pain complex and the repression compulsion complex, an instinctive drive of the organism to return to previous states. 'The Ego and the Id' (1923), his last work on psychoanalysis, outlined a new theory of the ego in which he showed the ego and the superego to be in constant tension, giving rise often to morbid mental attitudes, e.g. inferiority complexes, guilt feelings etc. Four of Freud's most prominent associates, Jung, Adler, Rank and Stekel, founded separate schools of psychoanalysis

The first frontiers, formed when colonists moved from the Atlantic coast into the Pennsylvania valley and across the Allegheny Mtns. deep into the continent, developed chiefly after the War of 1812. First came pioneers engaged in hunting and subsistence farming, then came settlers who bought the pioneers' half-developed land and introduced a simple, community life, and after them came financiers and businessmen who brought the communities to maturity and gave them a voice in national affairs. The last frontiers, from 1840, bringing the greatest hardships to settlers but also the richest rewards, carried Americans to the Pacific coast. Settlement came mostly in rushes accompanied by lawlessness, waste, exaggerated optimism and a 'get-rich-quick' attitude. Although the federal census announced the physical end of the frontier in 1890, the unique frontier experience produced a nation and a people marked by individualism, courage, belief in progress, and love of freedom and opportunity

George III (1738–1820), king of Great Britain (1760–1820), elector (1760–1815) and then king (1815–20) of Hanover. Brought up to favor personal rule, he caused the resignation of the elder Pitt and of Newcastle (1761), and ruled through patronage for over 20 years. The British defeat in the Revolutionary War (1775–83) made him unpopular. He brought the younger Pitt to power (1783) and took a less active role in politics, although he caused a political crisis in 1801 by refusing to sign the Catholic Emancipation Act. His growing insanity led to the regency (1811–20) of the prince of Wales (later George IV)

George IV (1762–1830), king of Great Britain and Hanover (1820–30), after being regent (1811–20) for his father, George III. His reign saw the passage of the Catholic Emancipation Act (1829). The Crown lost power and prestige during his reign, because of his attempt to divorce his wife for adultery (the Queen's Affair, 1820–1) and because of his extravagant dissipation

German Democratic Republic (East Germany) a republic (area 41,802 sq. miles, pop. 16,738,000) of central Europe on the Baltic. Capital: East Berlin. Language: German, with a small Sorbian minority in the southeast. Religion: 81% Protestant, 11% Roman Catholic. The land is 47% arable, 27% forest and 12% pasture. Coastal lagoons give way to the N. German plain: this comprises (with N. Poland) the Baltic lake plateau (lakes and glacial valleys, with peat deposits) and further south a fertile loess region. The south is a highland including the Harz Mtns, the Fichtelgebirge and the Thuringer Wald in the west and the Erzgebirge along the Czechoslovak border. The Oder is frozen 80 days a year and there is often sea ice along the Baltic coast and permanent winter snow east of Berlin. Average temperature: [illegible] (Jan.), 65° (July). Rainfall: 20 ins except in the southern mountains (30–50 ins). Livestock: cattle, hogs, sheep, poultry, horses. Crops: cereals, potatoes, sugar beet. Agriculture is largely organized in collective farms and in cooperatives for machinery and distribution. Minerals: lignite (world's largest producer), rare metals (uranium, cobalt, bismuth, arsenic and antimony in E. Thuringia and W. Erzgebirge), iron ore, coal, copper, potash. The major industries are nationalized. Industries: iron and steel, mining, chemicals, textiles, shipbuilding, diesel engines, machinery and machine tools, shoes, photographic and optical goods, electrical equipment, cement, toys. Exports: manufactures, machines, factories (e.g. prefabricated sugar refineries and shipyards). Imports: iron and steel, foodstuffs, phosphate. Port: Rostock (enlarged to deal with the whole E. German and Czechoslovak hinterland). There is an extensive river system. There are 44 universities and colleges. Monetary unit: deutsche mark (East) (100 pfennigs). In the administrative reorganization of 1952 the five East German states were replaced by 14 districts. Government: Council of State with chairman as head of state; Erich Honecker has served as chairman since 1971. The Council of Ministers heads the government with its chairman acting as prime minister; Willi Stoph has served as chairman since 1964. Most members of the unicameral legislature belong to the communist Socialist Unity party (SED). The general secretary of the SED central committee also serves as Council of State chairman. East Germany became a member of the Warsaw Treaty Organization and Comecon in the 1950's. HISTORY *GERMANY

German language the standardized form of High German, belonging to the Germanic family. It is the official and literary tongue in Germany, Austria and German Switzerland. It is pronounced according to rules set by a commission in 1898 for the guidance of German actors. Taken in a wider sense, it consists of a number of dialects of central and southern Germany, known as High German, and the dialects of the north, known as Low German. The development of a tongue which could be read and understood by the nation as a whole was largely the work of Martin Luther: his use, esp. in his translation of the Bible, of the vocabulary of the common people of Thuringia and of the style employed officially in the Saxony electorate, had a crystallizing influence. Modern German is characterized by a strict word order, a well-preserved system of inflections and an elaborate system of compounding words

Ger·ma·ny (dʒə́:rməni:) a region of north central Europe divided since 1949 into two states: the German Democratic Republic (East Germany) and the Federal Republic of Germany (West Germany). (For geographical descriptions see separate entries.) HISTORY The area was overrun by German tribes (5th and 6th cc.) after the collapse of the Roman Empire. Saxony was gradually conquered by the Franks (6th and 7th cc.). The Merovingian dynasty was replaced (751) by the Carolingians under Pépin III. The empire of his son Charlemagne was divided into three by the Treaty of Verdun (843). The eastern part, the Kingdom of the E. Franks, formed the nucleus of a German state, and was enlarged at the Treaty of Mersen (870). While the frontiers were attacked by Magyars, Norsemen and Slavs, great feudal duchies developed: Franconia, Swabia, Bavaria, Saxony, Lorraine. Conrad of Franconia, elected king (911), tried in vain to impose his authority on the dukes. His successor, Duke Henry of Saxony (who reigned 919–36), restored some of the royal power by his victories over the Magyars and Slavs. This policy was continued in the reign (936–73) of Otto I, who intervened in Italy on behalf of the pope (951), and was crowned Holy Roman Emperor (962). Imperial power over the Church reached its peak under Henry III (1039–56), but then declined as a result of the Investiture Controversy, civil disturbances and rebelling dukes. The last German duchy, Saxony, was destroyed (1180) in the reign of Frederick I, and the Slavs were pushed back eastwards (12th and 13th cc.). Germany relapsed into anarchy, however, on the death of Frederick II (1215–50). After the Great Interregnum, the German princes elected Rudolf of Hapsburg as Emperor (1273). The early Hapsburgs (1273–1308) expanded their territories, but could not establish a centralized monarchy. Germany disintegrated into more than 350 warring states. Emperors relied on the prosperous cities and commercial leagues of the 15th c. (*HANSEATIC LEAGUE) for support against the rebellious nobility and peasants. Individual states, esp. Hapsburg Austria under Maximilian I and Charles V, consolidated their power. The Reformation split Germany into a Catholic south and a Lutheran

north. The Thirty Years' War completed the devastation of Germany, which was left as a loose confederation of petty principalities under the nominal rule of the Emperor (PEACE OF *WESTPHALIA 1648) Prussia, under the Hohenzollern Electors of Brandenburg, emerged as a powerful state, and defeated Austria in the Seven Years' War (1756–63). The Hohenzollerns produced three great rulers in one century: the Great Elector Frederick William (who reigned 1640–88), Frederick William I (1713–40) and Frederick II (1740–86). German philosophy, music and literature flourished (*ENLIGHTENMENT). Napoleon finally destroyed (1806) the Holy Roman Empire, and combined all the German states except Prussia and Austria in the Confederation of the Rhine (1806). This was replaced by the German Confederation (1815) with Prussia and Austria. At the Congress of Vienna (1815) Prussia was rewarded for her part in the defeat of Napoleon by important territorial gains along the Rhine. Metternich's Austria enforced a reactionary [illegible] Prussia formed a customs union, the Zollverein (1834), with the S. German states. The 1848 revolution removed Metternich, but the Frankfurt Parliament failed to unify Germany, and disbanded. Austrian domination was restored by the Treaty of Olmutz (1850). Bismarck, in charge of Prussian policy from 1862, pursued a 'little Germany' policy (i.e. Germany without Austria): Prussia attacked and defeated Schleswig-Holstein (1864), Austria (1866) and then France (1870–1). The S. German states agreed to join a German empire, of which the Prussian king was proclaimed emperor (Jan. 18, 1871). Germany gained Alsace-Lorraine from the Franco-Prussian War, and began to industrialize rapidly. Bismarck, chancellor of the German Federal Empire (1871–90), struggled with Catholic and Socialist opposition (*KULTURKAMPF), and introduced a social insurance plan (1881–9). Conflicting alliances were formed with Austria and Russia (*DREIKAISERBUND 1873) and with Austria (1879) and Italy (1882). Under Kaiser Wilhelm II (1888–1918), Germany's colonial expansion clashed with British and French interests. German interest in the Balkans (*BAGHDAD RAILWAY) angered Russia. Crises in Morocco (1905 and 1911) increased Germany's isolation. In the 1st world war (1914–18), Germany invaded Belgium and France (1914), Poland, Rumania and Serbia (1915), and defeated Russia (1918). Germany's exhaustion in 1918 was increased by the terms [illegible] fled after the outbreak of a Social Democratic revolution, all the German states became republics, and a democratic federal constitution was adopted at Weimar (1919). The Social Democratic government, under Ebert (1919–25) and Hindenburg (1925–34), led the national recovery. But the world economic crisis (1929) created mass unemployment and national bankruptcy. Hitler, leader of the National Socialists, seized power (1933) and instituted a totalitarian state by terrorist methods. He repudiated the Treaty of Versailles, rearmed Germany, occupied the Rhineland (1936), allied with Italy and Japan (1936), intervened in the Spanish Civil War (1936–9), annexed Austria, and demanded parts of Czechoslovakia (1938). Germany's invasion of Danzig and Poland (1939) provoked the 2nd world war (1939–45). Germany invaded Denmark, Norway, the Netherlands, Belgium, France (1940), Yugoslavia, Greece (1941), N. Africa (1940), and much of Russia (1941). Germany finally surrendered to the Allies (May 8, 1945). After the war, Germany was disarmed, and lost her eastern provinces, beyond the Oder-Neisse line, to Poland. The Allies divided Germany into four occupation zones (American, British, French [illegible] (Apr. 1948–May 1949) led to the division of Germany (1949) into East and West Germany. West Germany became a member of the European Coal and Steel Community (1952), a sovereign state and member of NATO (1955), was rearmed, regained the Saar (1957), and entered the European Economic Community (1958). Rapid economic recovery took place under the [illegible] East Germany remained in the Russian sphere of influence. The East German authorities built (1961) a wall dividing East and West Berlin in an attempt to stop the flow of refugees to West Germany. The West German government signed (1963) a treaty of cooperation with France. In 1970 W. Germany recognized de facto the eastern frontiers of Poland. West Germany's policy of *Ostpolitik* established a new relationship with East Germany and the Soviet Union, outlined by a series of treaties between West Germany, the U.S.S.R., Poland and East Germany. In 1970, West German Chancellor Brandt met with East German Chairman Willi Stoph; in 1972 a Quadripartite Agreement was signed regarding the status of Berlin, and a Basic Treaty settled relations between the two states, stopping short of reunification. In 1973 both Germanies became full U.N. member nations

Germany, Federal Republic of (West Germany) a republic (area, incl. West Berlin, 95,908 sq. miles, pop. 61,713,000) of central Europe on the North Sea and the Baltic. Capital: Bonn. Language: German, with a small Danish minority. Religion: 51% Protestant, 45% Roman Catholic, with a very small Jewish minority. The land is 36% arable, 28% forest and 23% pasture. Universities: Accra, Kumasi. Monetary unit: cedi (100 pesawas). HISTORY Ghana takes its name from the powerful empire which flourished in the region of the Middle Niger (4th–mid-11th cc.). The first Europeans to visit the region were Portuguese traders (1471) followed by Dutch, English, Danish and Swedish slave merchants who set up forts and settlements. The British gained control of the area, known as the Gold Coast. The coastal states became a Crown colony and the Northern Territories a protectorate (1901). A new constitution (1946) gave Africans a share in government, and the constitution of 1951 gave a large measure of internal self-government. Dr Kwame Nkrumah was named prime minister (1952). British Togoland voted (1956) to become an integral part of an independent Gold Coast. The Gold Coast became the independent dominion of Ghana within the British Commonwealth (Mar. 6, 1957). Ghana became a republic with a presidential regime on July 1, 1961 and a one-party socialist state (1964). The Ghana army removed the civilian government by a coup d'état (Feb. 1966). Civilian government was restored (1969), with Dr Busia as prime minister. Edward Akuto Addo was elected (1970) president. A coup d'état (1972) overthrew Dr Busia, and a military regime, with Lt.-Gen. I.K. Acheampong as chairman of the supreme military council, ruled the country. In 1979 Hilla Limann became president, but he was deposed in a military coup [illegible]. Head of state: Rawlings

L. *gothicus*]

—**Gothic architecture**, a development of the earliest Romanesque, spread from N.W. France to flourish all over Europe in the 12th-15th cc., as far afield as Finland, Portugal and Sicily. Each country tended to produce a national style of Gothic (*DECORATED, *PERPENDICULAR). Its distinguishing features are the pointed or ogival arch, elaborate stone vaulted roofs, clustered columns and rich stone carving. Development of technique led to high buildings with walls consisting very largely of windows, the great stresses being taken by the arches themselves, by pillars, and by buttresses, often flying buttresses. The Gothic church or cathedral, seeming to aspire eternally heavenwards, is naturally taken as a symbol of medieval spirituality. But Gothic is a term applied also to castles, palaces and houses, as well as sculpture, painting and the minor arts (the word is here loosely used to mean 'of the later Middle Ages'). In France, England and Germany, Gothic can be seen mingled with Romanesque or merging into the later Flamboyant style. A renewed appreciation of Gothic appeared in the 18th and early 19th cc. Interest in the Middle Ages became a cardinal doctrine of Romanticism and a symbol of revolt against rationalism. Scholarship developed, and 19th-c. architects in Europe and North America began to produce Gothic buildings of great correctness as well as some of high imagination. Gothic was also applied to municipal and industrial buildings, but by the 1880s the movement gave way to greater eclecticism

HISTORY (For the history of England and Scotland prior to 1707 see separate entries.) The Act of Union (1707) united England and Scotland, and reduced the threat of Scottish Jacobitism at a time when England was involved in the War of the Spanish Succession (1701–14). On the death (1714) of Queen Anne, the Hanoverian line succeeded to the throne, in accordance with the Act of Settlement (1701). After two unsuccessful risings (1715 and 1745), Jacobitism ceased to be an important political force, and a century of internal stability ensued. THE GEORGIAN AGE In the reigns (1714–27 and 1727–60) of George I and George II, government was dominated by the Whigs, under Stanhope, Townshend and Walpole. The period was marked by the growth of the cabinet and of ideas of party government and ministerial responsibility. With Walpole, the office of prime minister became a regular but unofficial feature of the constitution. Trade, finance and colonialism prospered, but brought Britain into conflict with France and Spain in the War of the Austrian Succession (1740–8) and the Seven Years' War (1756–63). The latter war, shrewdly directed by the elder Pitt, left Britain dominant in Canada and India, and the leading colonial power. Under the Whig oligarchy, the increased wealth brought by commerce was reflected in sumptuous country houses and landscape gardens. Classical taste was manifest in architecture, painting, furniture, music and literature. George III's attempt to take a more active part in politics than his predecessors culminated in the loss of the American colonies after the Revolutionary War (1775–83). Under the younger Pitt, economic expansion continued, with the growth of the Industrial Revolution and of improvements in agriculture and communications. Rapid growth of population, and the drift from the country to the towns, provoked social problems and the beginnings of radicalism. Economic problems were increased by the French Revolutionary Wars (1792–1802), the Napoleonic Wars (1803–15) and the War of 1812. Rebellion in Ireland (1798) led to the union of Great Britain and Ireland in the United Kingdom (1800). The skepticism and moral decadence prevalent in the earlier 18th c. gave way to the growth of Methodism, humanitarianism and evangelicalism. Literature was dominated by the Romantic movement, and economics by the theories of Adam Smith, Malthus and Ricardo. George III became increasingly insane and George IV became regent (1811–20) and then king (1820–30). During this reign, and that of William IV (1830–7), the prestige of the monarchy sank to a low level. The Congress of Vienna (1814–15) gave Britain new colonial possessions, but economic distress and unrest continued at home, while the Corn Laws (1815) kept the price of bread high. The Tory government (1812–27) of Lord Liverpool resorted at first to repression, resulting in the Peterloo Massacre (1819). After Castlereagh's death (1822), Canning introduced a more liberal foreign policy, while Huskisson and Peel began economic and domestic reforms. The Combination Laws were repealed (1824) and Catholic Emancipation was passed (1829). The Whig ministry (1830–4) of Lord Grey passed the Reform Act (1832), abolished slavery in the British Empire (1833), reformed the Poor Law (1834), passed a Factory Act (1833) and gave help to schools for the poor (1832).

THE VICTORIAN AGE Queen Victoria succeeded to the throne of Great Britain (1837), but Hanover was now separated from the British Crown. Melbourne continued as Whig prime minister until 1841, when he was replaced by a Conservative ministry under Peel. As the result of a campaign by Cobden and Bright, and of the Irish potato famine, Peel repealed (1846) the Corn Laws, thereby splitting his own party, which was then driven into opposition. Free trade, combined with Britain's naval predominance, increased her industrial supremacy over the rest of the world. Under Palmerston, foreign policy took on a jingoistic tone, but war was avoided, except for the Crimean War (1854–6) and the Indian Mutiny (1857–8). As railroads and heavy industry developed, towns grew rapidly, often creating slums, while trade unions began to be more effectively organized. The demands of the lower middle classes for a widening of the franchise failed with Chartism (1848), but were largely achieved by the Reform Acts of 1867 and 1884. Gladstone led a reforming Liberal ministry (1868–74) which carried out sweeping reforms of education (1870), the civil service (1870), local government (1871), the licensing laws (1872) and the army and introduced the ballot in parliamentary elections (1872). Disraeli led a Conservative ministry (1874–80) which carried out further domestic reforms and dealt with the problems of a rapidly expanding empire (*COMMONWEALTH). Queen Victoria was proclaimed empress of India (1877). Gladstone was again prime minister (1880–5, 1886 and 1892–4) and was increasingly occupied by Irish affairs. He had disestablished the Irish Church (1869) and had passed an Irish Land Act (1870), and he now made two unsuccessful attempts to carry an Irish Home Rule Bill (1886 and 1893). This issue split the Liberal party, Joseph Chamberlain leading the Liberal Unionists into alliance with the Conservatives, who were in power (1895–1902) under Salisbury. A growing policy of imperialism, esp. in Africa, led to the Boer War (1899–1902). Britain's policy of 'splendid isolation' was proving untenable, because her industrial lead had been overtaken by Germany and the U.S.A., and because her agriculture had begun to decline in the 1870s. Victoria's death (1901) ended an era which had produced many great writers (e.g. Dickens, Trollope, Carlyle, Tennyson, Hardy), religious reformers (e.g. Newman, Pusey) and scientists (e.g. Faraday, Huxley, Darwin). Art had been influenced by the Pre-Raphaelites and the Gothic Revival. The Fabian Society was drawing attention to social problems, and the Labour party was being formed. The popular press appeared at the end of the century to meet the demands of a population taking an increased part in national life. During Victoria's long reign, the monarchy regained the esteem and the affection of the people.

THE TWENTIETH CENTURY After Edward VII's accession, Balfour became prime minister (1902–). His Conservative ministry carried an important Education Act (1902), but was split by Chamberlain on tariff reform. In face of the menace of German armament, Britain signed alliances with Japan (1902), France (1904) and Russia (1907). A strong Liberal administration (1906–15) under Campbell-Bannerman and Asquith brought in many social reforms, in-

cluding the protection of trade union funds (1906), military reorganization (1907), the beginning of old-age pensions (1908) and the establishment of employment exchanges (1909). George V succeeded to the throne (1910). The rejection by the House of Lords of Lloyd George's attempt to tax unearned income on land (1909) led to a constitutional crisis which ended with the drastic reduction of the Lords' power by the Parliament Act (1911). The suffragette movement was resorting to violence to obtain votes for women, and the passage of Home Rule Bill (1914) brought the risk of civil war in Ireland, but domestic strife was submerged in the outbreak of the 1st world war (1914–18). A coalition government was set up (1915) under Asquith, who was replaced (1916) by Lloyd George. The British army, on a voluntary basis until 1917, lost about 800,000 men during the war. The vote was given to women over 30 and the school-dropout age was raised to 14 (1918). Lloyd George's coalition continued in power until 1922, having faced increasing problems of post-war economic settlement and of guerrilla warfare in Ireland. The ensuing Conservative government (1922–3) under Bonar Law and Baldwin gave independence to the Irish Free State (1922). The Labour party, which had grown steadily since the beginning of the century, formed its first government (1924) under MacDonald, but fell from power after nine months. A Conservative ministry (1924–9) under Baldwin faced increasing labor problems and the general strike of 1926. The voting age for women was reduced to 21 (1928). MacDonald again formed a Labour government (1929), but, as the world economic crisis was felt in Britain, this was widened (1931) to become a coalition national government. The gold standard, adopted in 1925, was abandoned (1931), payments on war debts were suspended, and protective tariffs were introduced with preference for empire countries (1932). Popular way of life was profoundly changed by the advent of broadcasting and the movies and the mass production of motor vehicles. A constitutional crisis occurred after the death (1936) of George V, when his successor, Edward VIII, announced his intention of marrying an American divorcee. Baldwin's refusal to give governmental approval to the marriage led to Edward VIII's abdication, and the succession of George VI (1936). Neville Chamberlain became prime minister (1936–40), and continued Baldwin's policy of appeasement toward the aggressions of the Axis powers until Britain entered the 2nd world war (Sept. 3, 1939). After the Germans had invaded Poland, Denmark, Norway, the Netherlands and Belgium, Chamberlain resigned (1940) in favor of Churchill, who led a coalition government until 1945. Thousands of British troops were evacuated from Dunkirk (1940), but the Battle of Britain (1940) prevented a German invasion. German bombs and rockets caused terrible damage, and the war as a whole cost Britain about 400,000 lives, and left her economically exhausted. The postwar Labour government (1945–51) under Attlee attempted to deal with the financial crisis, but had to accept vast sums of U.S. aid, and was forced (1949) to devalue the pound. A large-scale program of nationalization included the Bank of England (1945), air transport (1946), the supply of gas and electricity (1947), road and rail transport (1947) and the iron and steel industry (1949). The Welfare State was brought into being by the National Insurance Act (1946), the Housing Acts (1946 and 1949) and the National Health Service Act (1946), which provided free medical service for all. The Education Act of 1944 raised the school-dropout age to 15. Britain was faced with grave problems of inflation and of balance of payments. Rationing and conscription continued. The Conservative party was returned to power (1951–64), under the leadership successively of Churchill (1951–5), Eden (1955–7), Macmillan (1957–63) and Douglas-Home (1963–). [illegible] ceeded (1952) by Elizabeth II. The steel and road haulage industries were denationalized (1953), rationing was gradually ended, and there was a rapid growth of prosperity. Greek-speaking Achaeans invaded the Greek peninsula from central Europe c. 2000 B.C., displacing and enslaving the Pelasgians. The earliest highly developed civilization in the Aegean area was the Minoan civilization of Crete (c. 3000–1400 B.C.) which spread to the mainland and gave rise to the Mycenean civilization (c. 1400–1200 B.C.). This is the heroic age described by Homer. This civilization was destroyed (c. 1200 B.C.) by the Dorians, the second great wave of Greek-speaking invaders from the north, who increased the migrations to the islands and to Asia Minor. The early tribal settlements developed into city-states. Rising populations and a shortage of land led to overseas colonization on the coast of the Mediterranean (c. 750–500 B.C.). By 500 B.C. most cities were governed by oligarchies or democracies. In spite of their common language, the city-states remained divided and developed separately, with Athens and Sparta emerging as the leading powers. The Greek cities of Asia Minor, which had been absorbed into the Lydian and Persian empires during the 6th c., revolted (499 B.C.) and were crushed, despite help from Athens. This led to the Persian Wars (499–449 B.C.), in which Persia invaded European Greece and was defeated at Marathon (490) and Plataea (479), the Persian fleet being destroyed at Salamis (480). Athenian democracy reached its height under Pericles and Athens became the intellectual and artistic center of Greece. Growing rivalry between Sparta and Athens led to the Peloponnesian War (431–404 B.C.), which ended with the surrender of Athens. Continuing rivalries and conflicts greatly weakened the Greek city-states, and Macedonia, under Philip II, grew in power and dominated Greece (338 B.C.). Through his conquests, Philip's son, Alexander the Great, spread Greek civilization over the known Western world and across Asia to India. After his death (323 B.C.) his empire was divided by quarrels among his generals. Incessant internecine warfare further weakened Greece and it was made a Roman province (146 B.C.). Its culture continued to spread throughout the Near East and greatly influenced Rome (‡HELLENISM). When the Roman Empire was divided (395 A.D.), Greece became a province of the Byzantine Empire until it was divided into Latin Crusader Kingdoms (1204). It was conquered by the Turks (1466) and remained under Turkish rule until the successful Greek War of Independence (1821–30). A monarchy was established (1832) under Otto of Bavaria, who abdicated (1862) and was succeeded by George I (1863). Greece continued to absorb Turkish territories—Thessaly (1878), Crete, Macedonia, Epirus and most of the Turkish islands after the Balkan Wars (1912–13), and Thrace and part of N.W. Asia Minor after the 1st world war, in which Greece, after the deposition (1917) of pro-German King Constantine I, had fought on the Allied side. Greece lost its Asian territories in wars with Turkey (1921–3). Greek boundaries were finally settled with large transfers of minority populations. After the banishment (1924) of George II, monarchists and republicans struggled for power and Metaxas finally established a dictatorship (1936). After an abortive Italian invasion (1940), Greece was occupied (1941) by the Germans. Resistance continued until the liberation (1944), when the pro-communist guerrilla army (E.L.A.S.) was prevented from seizing power by British and American intervention, though not finally broken until 1949. A limited monarchy was restored (1946) under George II, succeeded by his brother Paul (1947). Greece joined NATO (1952) and has benefited from American aid. The army seized power (Apr. 21, 1967). King Constantine called (Dec. 13, 1967) upon army units to overthrow the military junta, failed, and went into exile. A republic was proclaimed in 1973 but a military dictatorship ruled until the following year when democracy was restored under Karamanlis. Andreas Papandréou took office in 1981 and was reelected in 1985

The subsequent kingdom of Guatemala attained independence from Spain (1821) but was annexed by Mexico (1822); after the Central American Federation, Guatemala again became independent (1839) and was ruled by a series of dictators. Economic progress was made between the two world wars. During the presidency (1931–44) of Gen. Jorge Ubico, large concessions were made to U.S. business interests, especially United Fruit. Following a popular revolution, Juan Jose Arevalo (1945–51) introduced reform, which was continued, esp. in agriculture, by his successor Jacobo Arbenz Guzmán. The support, however, which Arbenz drew from the Communists provoked Col. Carlos Castillo Armas to launch (from exile) a coup d'état. Castillo's term (1954–7) ended in his assassination. Miguel Ydigoras Fuentes, of the National Democratic Reconciliation party, won office (1958) but was also overthrown (1963) by a military junta which installed Col. Enrique Peralta Azurdia. Elections in 1966 were won by Julio Mendez Montenegro of the moderate leftist Revolutionary party. A surge in political violence (1966–8) was checked by Col. Carlos Arana Osorio, whose eradication in Zacapa of one of Latin America's largest guerrilla movements and whose 'law and order' electoral platform won him the presidency (1970). Violence, however, continued, including the murder of two foreign diplomats, U.S. Ambassador John Gordon Mein in 1968 and West German Ambassador Count Karl von Spreti in 1970. A rural guerrilla movement and numerous left- and right-wing terrorist groups disrupted Guatemala's politics from the mid-1960's. The country was governed by a series of military and elected civilian rulers from 1954. Christian Democratic party leader Marco Vinicio Cerezo Arevalo, elected president in Dec. 1985, promised fundamental land and tax reform may be in the offing. Guatemala's dispute with Belize over British Honduras remains unresolved.

He·gel (heɪgˈl), Georg Wilhelm Friedrich (1770–1831), German philosopher. In his 'Phenomenology of Mind' (1807), Hegel shows the historical development of the human mind from consciousness of mere sensory experience to reflective thought and ultimate awareness of itself as absolute knowledge. In 'Logic' (1812–16), he shows that the mind arrives at the truth by a dialectical process (usually known as the 'Hegelian triad') composed of three recurrent stages: (1) it gains an immediate grasp of its object (thesis), (2) on further reflection the primary thesis is opposed by contradictory evidence (antithesis), (3) considering the multiplicity of the evidence, the mind arrives at a resolution (synthesis). In Hegel's view this dialectical process was also the process of human history (e.g. the development of political and social institutions, science, art, religion etc.). Accordingly the study of history became for him the central concern of philosophy. Other important works are: 'Philosophy of History', 'Philosophy of Law', and 'Aesthetics'

Henry VI (1165–97), Holy Roman Emperor (1191–7) and German king (1169–97), son of

Frederick I. After his conquest of Sicily (1194), the Empire was at its height.

Henry VII (c. 1269–1313), Holy Roman Emperor (1312–13) and German king (1308–13), count of Luxembourg. He was hailed by Dante as the deliverer of Italy (1310).

Henry I 'Beauclerk' (1068–1135), king of England (1100–35) and duke of Normandy (1106–35), son of William I. He seized the crown in the absence of his elder brother Robert II, duke of Normandy, whom he later defeated at Tinchebrai (1106). He introduced several administrative and judicial reforms, including the organization of the royal exchequer. His conflict with Anselm (*INVESTITURE CONTROVERSY) ended in compromise (1107). After his only legitimate son had been drowned (1120), he tried to ensure the succession of his daughter Matilda. But on his death (1135) his nephew Stephen invaded, and had himself proclaimed king.

Henry II (1133–89), first Plantagenet king of England (1154–89), duke of Normandy (1150–89) and count of Anjou (1151–89), son of Geoffrey Plantagenet and Matilda. By his marriage (1152) to Eleanor of Aquitaine he acquired her vast domains in S.W. France. He restored order to an England ravaged by the civil wars of Stephen's reign. He subdued the barons, continued administrative reform and strengthened royal justice. His attempts to control the clergy (*CONSTITUTIONS OF *CLARENDON) led to conflict with Becket, and a compromise was reached after Becket's murder (1170). Henry made three successful attacks against the Welsh (1157, 1163, 1165), and one against Ireland (1171). His last years were taken up with the revolt of his four sons.

Henry III (1207–72), king of England (1216–72), son of John. During his minority (1216–27) the government was controlled successively by William Marshal, earl of Pembroke and Hubert de Burgh. He himself governed autocratically through favorites. His French marriage (1236) involved him in much extravagance and in war in France (1242). In 1258 the barons, led by Simon de Montfort, refused further grants of money until the king signed the Provisions of Oxford. Henry's repudiation of his signature (1261) led to the Barons' War (1263–5), in the course of which Henry was captured (1264). De Montfort governed through the Model Parliament until his death (1265), when Henry was restored to the throne.

Henry IV (1367–1413), first Lancastrian king of England (1399–1413), son of John of Gaunt and grandson of Edward III. Banished (1398) by his cousin, Richard II, he returned (1399), and deposed Richard. The barons rebelled, under Owen Glendower and Sir Henry Percy (1403) and under Thomas de Mowbray (1405), but were defeated.

Henry V (1387–1422), king of England (1413–22), son of Henry IV. He revived English claims to the French throne (1415) and reopened the Hundred Years' War. He defeated the French at Agincourt (1415), and conquered Normandy (1419). By the Treaty of Troyes (1420) he married Catherine of Valois, the daughter of Charles VI, and became heir to the French throne. He renewed the war with France (1421) but died the following year. He had restored order after the near anarchy of his father's reign, but his wars left the crown heavily in debt.

Henry VI (1421–71), king of England (1422–61, 1470–1), son of Henry V. John of Lancaster and Humphrey, duke of Gloucester, acted as regents during his minority. He was crowned king of France (1431) but the French under Joan of Arc succeeded in driving the English from all of France except Calais (1453). Henry's unpopularity stimulated Cade's rebellion (1450) and his attacks of insanity after 1453 led to the appointment of Richard, duke of York, as protector of the kingdom (1454–5). The rivalry of York and Lancaster led to the Wars of the Roses (1455–85); in the course of which York was killed (1460). Henry deposed (1461) and York's son crowned as Edward IV. Henry fled to Scotland (1461) and was captured by the Yorkists and imprisoned (1465–70). He was restored to power (1470), defeated by Edward at Tewkesbury (1471) and murdered.

Henry VII (1457–1509), first Tudor king of England (1485–1509), descendant of Edward III. In exile during the reign of Edward IV (1461–70, 1471–83), he led the opposition to Richard III (1483–5), whom he defeated at the Battle of Bosworth Field (1485). Henry's marriage to Elizabeth of York, daughter of Edward IV, ended the Wars of the Roses. He defeated Yorkist attempts to regain the throne by the pretenders Lambert Simnel (1487) and Perkin Warbeck (1497). His reign is notable for the restoration of royal power and of the rule of law after the Wars of the Roses. He continued the work of his Yorkist predecessors in organizing an efficient tax system, and enforced his authority through the court of Star Chamber. Trade prospered, and Henry left considerable financial reserves.

Henry VIII (1491–1547), king of England (1509–47), son of Henry VII. As prince of Wales, he married Catherine of Aragon. He invaded France and won the Battle of the Spurs (1513), but James IV of Scotland invaded England in his absence and was defeated at Flodden Field (1513). Under the influence of Cardinal Wolsey, English foreign policy aimed at a balance of power between France and Spain. Henry's desire for a male heir led him to ask Pope Clement VII to declare his marriage void (1527). Wolsey's inability to obtain this divorce led to his disgrace (1529). The marriage with Catherine was declared invalid by Cranmer (1533), and Henry married Anne Boleyn. The pope refusing to recognize this marriage, parliament passed the Act of Supremacy (1534), declaring Henry supreme head of the English Church. The monasteries were suppressed (statutes of 1536 and 1539). Anne was beheaded (1536), and Henry married Jane Seymour, who died in 1537. Thomas Cromwell arranged Henry's marriage to Anne of Cleves (1540), which ended in divorce. Henry's fifth wife, Catherine Howard, was executed (1542). His final marriage was to Catherine Parr (1543). During Henry's reign Wales and the marches were brought (1534–6) into a legal union with England and Ireland became a kingdom (1541). Henry was a man of scholarship and encouraged the arts.

... majority of Indians. It is an amalgam of traditions and rituals, of devotional and philosophical systems built up over the past 4,500 years arising from indigenous (Dravidian or Indus Valley) cults and successive invasions, notable among which was that by the Aryans (c. 2000–1500 B.C.). The earliest recorded scriptures are the Vedas (c. 500 B.C.), polytheistic hymns, and the Brahmanas (c. 8th c. B.C.). Of the philosophical systems, by tradition six in number, the most important is Vedanta, found in the Upanishads (c. 500 B.C.) and the later commentaries of Sankara, Ramanuja and others. The basis of Vedantist teaching is that ultimately reality is one, and that the variety of apprehension which comes to us through the senses is illusory. Man must rid himself of his illusions and ignorance if he is to become aware of, and to partake of, reality (brahma). He must come to know that his own individualized self is only a manifestation of the one self (atman), and he must then come to know that the one self is reality. This 'knowing' is not a mere intellectual knowledge, but an enlightenment of one's whole being. If one fails to find this 'release' (moksa), one is bound by the law of punishment and reward (†KARMA) to return to this world in a further incarnation, still tied to the wheel of rebirth (samsara). The attainment of moksa will come, according to the teaching most characteristic of the Upanishads, through meditation (†YOGA). The thoroughgoing monistic pantheism of the Vedantists was too cold a creed, however, for the majority of Hindus who, while respecting the yogis, sought other ways of escape from this world of illusion (maya). The Ramayana, the Mahabharata and the less important Puranas tell of the avatars of the god Vishnu. The most influential section of the Mahabharata is known as the Song of God (†BHAGAVAD-GITA). It has been described as 'the focus of all Indian religion'. It teaches the way of yoga, but also the way of devotion (bhakti) to a personal god and of nonattached everyday living (i.e. the carrying out of daily tasks and caste duties without self-involvement). The teaching of the Bhagavad-gita is the justification for the variety of Hindu practice today. Polytheism (in some cases, animism) is still the basis of much popular Hindu worship (at the house shrines, temples, processions and pilgrimages), but outward forms are not felt to be of any real consequence. The bhakti of the worshipper is what matters. Reform movements within modern Hinduism look for a purified cult and lay a greater stress on social responsibility than nonattachment would seem to imply, and most advocate the abolition of caste barriers. In this century the Ramakrishna Mission, Arya Samaj and the work of Gandhi have been influential. There are about 380 million Hindus: 366 million in India, 10 million in Pakistan, small minorities in Burma, Ceylon, Bali, South Africa, Kenya, Trinidad and Fiji.

Holy Roman Emperor (*hist.*) the head of the Holy Roman Empire

Holy Roman Empire a loose confederation of central European states formed in 962, when Otto I was crowned Holy Roman Emperor. Ostensibly to protect the papacy, it was designed to revive the imperial power of Charlemagne (crowned 800), which had disintegrated. The empire reached the height of its power under Henry III (1046–56), and became centered on Germany. It was weakened by the Investiture Controversy (1075–1122), and by the death (1125) of Henry V, the last direct descendant of Otto I. For the next two centuries the German princes claimed the right to elect the Emperor. Hohenstaufens were elected from 1138 to the Great Interregnum (1254–73). After this, Emperors ceased to intervene in Italy, and the imperial borders drew back to Germany. The Hapsburg dynasty supplied nearly all the Emperors from Albert II (1438–9) up to 1806, but in 1648 the Treaties of Westphalia robbed the empire of much of its power by recognizing the independence of the German princes. By the time Prussia emerged under Frederick II (1740–86) as the leading German state, the empire was no more than a name. It was finally ended (1806) by Napoleon

Other products: beans, sorghum, rice, sugarcane, tobacco, citrus fruits, zinc, lead, hydroelectricity. Imports: manufactured goods. Ports: Amapala on the Pacific, La Ceiba, Tela and Puerto Cortés on the Atlantic. University of Tegucigalpa (1847). Monetary unit: lempira (100 centavos). HISTORY Honduras formed (300–900 A.D.) part of the flourishing Maya civilization, but this had declined and been replaced by separate Indian groups when Columbus explored the north coast (1502). Spanish settlement began (1524) and prospered with the establishment of slave estates and the discovery of gold and silver (16th c.). After raids by the Dutch (1643) and the English (17th and 18th cc.), Honduras gained its independence from Spain (Sept. 15, 1821) and joined the Central American Federation (1823–38). There followed 70 years of internal strife, occupation by U.S. marines (1911–33), a civil war (1924) and a dictatorship (1933–49). Honduras joined the Organization of Central American States (1951). The liberal leader Ramón Villeda Morales was elected president (1957) but deposed (1963) by Col. Osvaldo López Arellano, who won (1965) election by the assembly. The 'football war' (1969) with El Salvador resulted in a Colombia-style pact between the two principle parties, National and Liberal, in which all government offices were distributed equally between the two, and in Honduras' withdrawal from the Central American Common Market. Ramon Cruz, the government's nominee, was elected (1971) president in a vote open for the first time to women. Policarpo Paz García served as provisional president until 1982 when a national assembly and president Roberto Suazo Cordova took office. Nicaraguan and Honduran troops saw conflict in mid-1985

Hong Kong (hŏŋkŏŋ) a British Crown Colony (area 398¼ sq. miles, pop. 5,313,000) on the coast of S.E. China, 90 miles southeast of Canton. It consists of Hong Kong Is. (32 sq. miles), Kowloon peninsula (incl. Kowloon city) and Stonecutters Is. (3¾ sq. miles), and the New Territories (356 sq. miles), on the mainland. Capital: Victoria (pop. 1,000,000). People: Chinese. Languages: Chinese (Cantonese dialect), English, and various Chinese dialects. The land is 13% arable. Hong Kong Is. is hilly, rising to 1,823 ft at Victoria Peak. Kowloon peninsula, separated from the island by a 1-mile harbor, extends into the New Territories. These are mostly mountainous (peaks between 2,000 and 3,000 ft), with a small agricultural lowland in the northwest. Average temperature (F.): (Feb.) 59, (July) 82. Rainfall: 85 ins (with great [illegible]). Rainy season: May–Sept. Typhoons occur. Crops: rice, vegetables, fruit. Industries: textiles and clothing, shipbuilding, [illegible] aircraft engineering, machinery, and cement, electrical equipment, paint, food processing, rubber, [illegible] plastics, [illegible] manufacturing, printing, tourism. The natural harbor (area 175 sq. miles) at Victoria is among the world's finest, and Hong Kong is the world's largest entrepôt port. University: [illegible] (Chinese University, 1963). Monetary unit: Hong Kong dollar (100 cents = 1 H.K. $). China ceded (1842) Hong Kong to Britain after the Opium War. Kowloon peninsula was added (1860) and, on a 99-year lease, the New Territories (1898). There has been an influx of refugees from the mainland since 1947. The rapid expansion of Hong Kong's manufacturing industries has compensated for the loss of entrepôt trade with China. The Korean War caused an embargo (1951) on the export of strategic goods to China. Britain and China jointly announced in 1984 that the colony would become a special administrative [illegible] of China in '97. China agreed to preserve the colony's currency and legal system, as well as specific rights of residents, until 2043. A Chinese-British organization will monitor the agreement until the year 2000

Hundred Years' War a period of intermittent war (1337–1453) between France and England. It was basically caused by the refusal of the Plantagenet kings of England to do homage to the kings of France for the fief of Aquitaine. Other causes were Anglo-French rivalry for the Flanders wool trade, and a growing sense of national consciousness. The war began (1337) when Edward III of England claimed the French throne. The English won victories at Sluis (1340), Crécy (1346) and Poitiers (1356), and gained more French territory, though most of it was lost again by 1373. Henry V renewed the war (1415), won a crushing victory at Agincourt (1415) and was recognized as heir to the French throne (Treaty of Troyes, 1420). After his death (1422), Joan of Arc rallied the French, and the English were gradually expelled (1423–53) from France, until only Calais remained in their possession

Hungarian language the Finno-Ugric language of Hungary spoken by about 10,750,000 people including Rumanian, Czechoslovakian and Yugoslav minorities. It has borrowed considerably from Latin, Slavic, German, Bulgarian and Turkish. Hungarian has a well-developed case system and is characterized by an abundant use of suffixes

Hun·ga·ry (hʌŋgəri:) a republic (area 35,912 sq. miles, pop. 10,645,000) of central Europe. Capital: Budapest. Language: Hungarian (96%), with a small German minority. People: 93% Magyar, 5% German, with Slovak, Croat and other small minorities. Religion: 62% Roman Catholic, 25% Protestant, 3% Orthodox, 1% Jewish. The Danube bisects the country. East of it a large plain, the Nägy Alföld, itself bisected by the Tisza, stretches beyond the Rumanian border. Hills (rising to 3,336 ft) break it in the far north, where floods are frequent. West of the Danube lies Transnubia, a rolling plain, in the south broken by hills rising to 2,648 ft near Pécs, with Lake Balaton and the Bakony Forest (2,333 ft) in the center. The land is 60% arable, 12% forest and 17% pasture. Climate: continental. Average rainfall: under 20 ins in the Tisza Valley, 20–30 ins in the plains, over 30 ins in the mountains. Livestock: cattle, sheep, hogs, horses. Agricultural products: corn, wheat, barley, sugar beet, potatoes, eggs, milk, wool, wine. Resources: coal (esp. near Pécs), bauxite, oil, hydroelectricity. Industries: fishing, mining, steel, cement, fertilizers, textiles, sugar. Exports: wheat, cattle, metal products, clothing, footwear. Imports: lumber, hides, paper, cotton, machinery. There are four universities. Monetary unit: forint (100 filler). HISTORY. Magyar tribes from the Urals conquered what is now Hungary (late 9th c.). The country was Christianized and unified under St Stephen, the first Hungarian king (1001–38). After a troubled period during which foreign rulers struggled for the Hungarian crown, the country fell to the Turks (Battle of Mohacs, 1526). By 1699, the Turks had been expelled, and the Hapsburgs gained control. Protestantism was repressed and estates confiscated. A series of rebellions followed, until a general amnesty was proclaimed (1687). Hungary became an integral part of the Hapsburg dominions (1722) and was largely ruled from Vienna. A revolutionary movement (1848) under Kossuth and Deak won a measure of self-government and the liberation of the peasants: but the revolution was crushed (1849) by Austrian and Russian forces, and an absolutist régime was imposed. Hungary gained complete internal independence with the establishment (1867) of the dual monarchy of Austria-Hungary. An independent republic was proclaimed (1918) but, after Bela Kun's brief communist rule (1919), Hungary was made a constitutional monarchy (1920) under the regency of Horthy. In an attempt to solve the problem of minorities, Hungary was reduced to the area inhabited by Magyars, involving the loss of over half its territory and population. After occupation by the Germans (1944) and the Russians (1945), a republican constitution was adopted (1946). The Communist party gained full control (1948) and Hungary was declared a republic (1949). A revolution (1956) was crushed by Soviet armed force and a new régime set up under Kádár who con-

tinues to rule. Under Kādār economic and political conditions improved

Hun·kers and Barn·burn·ers (hʌ́ŋkərz, bárnbə:rnərz) two factions of the New York State Democratic party during the 1840s. The conservative Hunkers ('those who seek office for themselves'), led by William L. Marcy, advocated the use of revenues for internal improvements, the chartering of state banks, and the perpetuation of slavery. The radical Barnburners ('farmers who burn their barns to destroy rats'), led by Martin Van Buren, advocated the abolition of slavery and the use of revenues to pay off the state debt. When the slavery issue prompted the Barnburners to join (1848) the Free-Soil Party, it weakened the support for New York's Democratic presidential candidate, and this helped to elect General Zachary Taylor

Hy·der·a·bad (haidərəbæd, haidərəbud) a former principality (1724–1949) in central Deccan, central India, since 1956 mainly part of Andhra Pradesh ‖ a city (pop. 2,093,448) of this region, now capital of Andhra Pradesh: pottery, paper, textiles, antibiotics
Hyderabad the capital (pop. 795,000) of Sind, Pakistan, on the Indus, a rail center: silk weaving, gold and silver work, lacquerwork, pot-
Hy·der A·li (haidərəli:) (c. 1722–82), ruler of Mysore (1766–82). He fought two wars (1767–9 and 1780–2) against the British in India
hy·der·gine (haidərdʒin) *n.* (*pharm.*) a drug taken sublingually to stimulate brain activity
Hy·dra (haidrə) a Greek island (area 21 sq. miles, pop. 3,000) in the Aegean, 4 miles off the coast of Argolis
hy·dra (haidrə) *n.* a member of *Hydra* or various other genera of small, freshwater hydrozoan polyps having a basal disk attaching it to a stone or plant. Its slender cylindrical body has threadlike stinging tentacles around the mouth as an aid to catching prey. It is nonmetagenetic and reproduction is typically by asexual budding, though sexual reproduction does occur ‖ (*Gk mythol.*) the manyheaded snake killed by Hercules (*HERACLES) [L. fr. Gk *hudra*, the snake killed by Hercules]
hy·dran·gea (haidreindʒə) *n.* a member of *Hydrangea*, fam. *Saxifragaceae*, a genus of plants whose showy blue, pink or white flowers are in large cymose corymbs. Most, or in cultivated varieties all, of the flowers are neuter [Mod. L. *Hydrangea* fr. Gk]
hy·drant (haidrənt) *n.* a pipe, fitted with tap and nozzle, by which water may be drawn from a supply main, e.g. for fire fighting, street cleaning etc. [fr. HYDRO-]
hy·dranth (haidrænθ) *n.* (*zool.*) a nutritive zooid in a hydroid colony [fr. HYDRA + Gk *anthos*, flower]
hy·drate (haidreit) **1.** *n.* a compound or other chemical species containing hydrogen and hydroxyl either in the proportion in which they form water or associated (e.g. by adsorption) with one or more molecules of water **2.** *v.t. pres. part.* **hy·drat·ing** *past* and *past part.* **hy·drat·ed** to cause or allow to form a hydrate (in either of the senses above) [fr. Gk *hudōr*, water]
hy·drau·lic (haidrɔlik, haidrɔlik) *adj.* of fluids, esp. water, in motion. of the pressure exerted by water when conveyed through pipes ‖ of substances, machinery etc. affected by or operated by fluids in motion, *hydraulic brakes* **hy·drau·li·cal·ly** *adv.* [fr. L. *hydraulicus* fr. Gk fr. *hudōr*, water + *aulos*, pipe]
hydraulic brake a brake utilizing the resistance of oil both to compression and to flow in a narrow tube
hydraulic cement a cement which sets hard

hydraulic press (...press) machine applying power made of the fact that fluid pressure is transmitted equally in all directions (Pascal's law), a force applied to a piston of small area being transmitted as pressure to a piston of large area, this therefore exerting a much greater force

hydraulic ram a pump for raising a smaller amount of water to a higher elevation or pressure by using the energy of a greater amount of falling water

hy·drau·lics (haidrɔ́liks, haidrɔ́liks) *n.* the science of controlling and using water pressure or the pressure of other fluids ‖ the application of hydrodynamics and fluid mechanics to engineering problems

hy·dra·zine (háidrəzi:n) *n.* a colorless reducing basic liquid, NH_2NH_2, used in rocket and jet engine fuels [fr. HYDRO- + AZOTE]

hydra·zo·ic acid (haidrəzóuik) a colorless, poisonous, foul-smelling, explosive liquid, HN_3, whose heavy metal salts are also explosive [HYDRO- + AZOTE]

hy·dric (háidrik) *adj.* characterized by abundance of moisture (cf. XERIC) [fr. HYDRO-]

hy·dride (háidraid) *n.* (*chem.*) a binary compound of hydrogen with another element or radical [fr. HYDRO-]

hy·dri·od·ic acid (haidriɔ́dik) a strong reducing acid, HI, formed by dissolving hydrogen iodide in water [fr. HYDRO- + IODINE]

hydro- (háidrou) *prefix* relating to water ‖ afflicted with or accompanied by an accumulation of serous fluid ‖ hydrogen or combined with hydrogen [ult. fr. Gk *hudōr*, water]

hy·dro (háidrou) *n.* (*colloq.*) a hydrofoil speedboat

hy·dro·bro·mic acid (haidroubroumik) a strong acid, HBr, formed by dissolving hydrogen bromide in water [HYDRO- + *bromic*, containing bromide]

hy·dro·car·bon (haidroukɑ́rbən) *n.* (*chem.*) one of a large class of organic compounds containing only carbon and hydrogen, occurring in many cases in petroleum, natural gas and coal

hy·dro·cele (háidrəsi:l) *n.* (*med.*) an accumulation of fluid in a body organ, esp. the scrotum [L. fr. Gk fr. *hudōr*, water + *kēlē*, tumor]

hy·dro·ce·phal·ic (haidrousəfǽlik) **1.** *adj.* of or having hydrocephalus **2.** *n.* someone who suffers from hydrocephalus

hy·dro·ceph·a·lus (haidrəsefələs) *n.* (*med.*) an excess of cerebrospinal fluid in the cranial cavity causing enlargement of the skull and mental retardation [L. fr. Gk fr. *hudōr*, water + *kephalē*, head]

hy·dro·chlo·ric acid (haidrəklɔ́rik, haidrəklóurik) a strong acid, HCl, formed by dissolving hydrogen chloride in water. It has wide industrial and laboratory applications

hy·dro·chlo·ride (haidrəklɔ́raid, haidrəklouraid) *n.* a compound of hydrochloric acid

hy·dro·chlo·ro·thi·a·zide (haidrəklourəθaiəzaid) *n.* ($C_7H_8O_4N_3ClS_2$) (*pharm.*) diuretic drug used to reduce high blood pressure; marketed as Esidrix, HydroDiuril, and Oretic

hy·dro·cy·an·ic acid (haidrousaiǽnik) a weak, intensely poisonous acid, HCN, formed by dissolving hydrogen cyanide in water

hy·dro·dy·nam·ic (haidroudainǽmik) ‖ **hydrodynamics** *n.* relating to hydrodynamics **hy·dro·dy·nam·ics** *n.* the branch of hydromechanics that deals with the motion of fluids and of immersed solid bodies (cf. HYDROSTATICS) [fr. Mod L. *hydrodynamica*]

hy·dro·e·lec·tric (haidrouilektrik) *adj.* of the production of electricity by water power

hy·dro·e·lec·tric·i·ty (haidrouilektrísiti:, háidrouilektrísiti:) *n.* electricity produced by hydroelectric conversion

hy·dro·flu·or·ic acid (haidrouflu ɔrik, haidrouflu:ɔrik) a highly corrosive and poisonous weak acid, HF, formed by dissolving hydrogen fluoride in water, used in etching glass [HYDRO- + *fluoric*, containing fluorine]

hy·dro·foil (háidrəfɔil) *n.* a ... attached to a ship's hull and acting as a stabilizer ‖ a plate or fin, e.g. on a speedboat, for lifting the hull clear as the speed mounts ‖ a craft equipped with such hydrofoils

hy·dro·gas·i·fi·ca·tion (haidrougæsifikéiʃən) *n.* (*chem.*) creation of methane by the use of hydrogen ‖ hydrogasification used for the process

hy·dro·gen (háidrədʒən) *n.* a nonmetallic, monovalent element (symbol H, at. no. 1, at. mass 1.00797) that is the lightest of all the elements and has the simplest structure (one proton and one electron). It is too reactive to be found in the uncombined state on the earth, but it occurs in a very great number of compounds. It is used in syntheses, reduction and hydrogenation, as a component in rocket fuel, in producing high-temperature flames (by combustion with oxygen) [fr. Fr. fr. HYDRO- + -*gen* (fr. Gk *gennan*, to produce)]

hy·dro·gen·ate (haidrɔ́dʒineit, haidróudʒineit) *pres. part.* **hy·dro·gen·at·ing** *past* and *past part.* **hy·dro·gen·at·ed** *v.t.* to combine chemically with hydrogen ‖ *v.i.* to undergo chemical combination with hydrogen

hy·dro·gen·a·tion (haidrɔdʒənéiʃən) *n.* the chemical process in which hydrogen is either added to an unsaturated molecule (e.g. the hydrogenation of olefines to increase the quality of fuels or of unsaturated vegetable oils to produce margarine) usually in the presence of a catalyst, or the destruction of highly aromatic molecules (e.g. in coal) at high temperature and pressure with the addition of hydrogen

hydrogen bomb (*abbr.* H-bomb) a bomb releasing enormous energy by the fusion at extremely high temperature and pressure of nuclei of isotopes of hydrogen to form helium

hydrogen bond a weak chemical bond formed between covalently bonded hydrogen and a more electronegative element (e.g. oxygen, fluorine) that may be either intermolecular or intramolecular, and that is primarily electrostatic in character

hydrogen bromide HBr, a colorless gas that forms hydrobromic acid when dissolved in water

hydrogen chloride HCl, a colorless, pungent, poisonous gas that forms hydrochloric acid when dissolved in water

hydrogen cyanide HCN, an intensely poisonous volatile liquid or gas that forms hydrocyanic acid when dissolved in water

hydrogen electrode an electrode consisting usually of a spongy, platinum surface bathed in an acidic solution over which hydrogen gas is bubbled. When the partial pressure of hydrogen gas and the concentration of hydrogen ions are adjusted to standard levels the electrode is conventionally assigned a potential of zero and serves as a standard of comparison for all other redox potentials

hydrogen fluoride HF, a colorless, very poisonous, corrosive liquid or gas that forms hydrofluoric acid when dissolved in water

hydrogen iodide HI, a heavy, colorless gas that forms hydriodic acid when dissolved in water

hydrogen ion (*chem.*) a positive ion of hydrogen, H+

hy·drog·e·nize (haidrɔ́dʒinaiz, haidróudʒinaiz) *pres. part.* **hy·drog·e·niz·ing** *past* and *past part.* **hy·drog·e·nized** *v.t.* to hydrogenate [HYDRO- + -*gen* + -*ize*]

hydrogen laser (*phys.*) a laser utilizing hydrogen to generate beams in the ultraviolet range

hydrogen maser (*phys.*) a gas maser utilizing hydrogen to produce its signals

hy·drog·e·nous (haidrɔ́dʒənəs) *adj.* of, relating to, or containing hydrogen

hydrogen peroxide H_2O_2, a thick, syrupy, explosive, corrosive liquid, usually made available in solution. It decomposes to give oxygen and water. It is used as an oxidizing agent, e.g. in bleaching and antiseptics, and as a component of rocket fuel

hydrogen sulfide, hydrogen sulphide H_2S, a colorless, inflammable, very poisonous, foul-smelling gas. It occurs in some natural springs, volcanic gases and petroleum. It is used in syntheses and as a precipitating agent

hy·drog·ra·pher (haidrɔ́grəfər) *n.* a specialist in hydrography

hydrographic (haidrəgræfik) ‖ **hydrographical** *adj.* relating to hydrography

hydrography (haidrɔ́grəfi:) *n.* the branch of hydrology dealing with the measurement and description of the physical features of oceans, seas, lakes, rivers, etc., with regard to their industrial uses and navigability [fr. Gk *hudor*, water, after GEOGRAPHY]

hy·droid (háidrɔid) **1.** *n.* the polyp phase of a hydrozoan **2.** *adj.* of the *Hydroida*, an order of hydrozoans in which the asexual polyp generation alternates with a generation of medusae or of polyps having medusoid reproductive structures, like a hydra polyp [HYDRA]

hy·drok·i·net·ics (haidroukinétiks, haidroukainétiks) *n.* the scientific study of the flow of fluids

hydrological (haidrəlɔ́dʒikəl) ‖ **hydrology** *n.* relating to hydrology

hydrologist (haidrɔ́lədʒist) *n.* a specialist in hydrology

hy·drol·o·gy (haidrɔ́lədʒi:) *n.* the scientific study of water, esp. its natural occurrence, characteristics, control and conservation [Mod. L. *hydrologia*]

hy·drol·y·sis (haidrɔ́lisis) *n.* a chemical reaction of water in which the reagent other than water is decomposed and hydrogen and hydroxyl (or a part of it) from the hydrogenated (or more rarely, oxygenated) compounds

hydrolyte (háidrəlait) *n.* a substance subjected to hydrolysis **hy·dro·lyt·ic** (haidrəlítik) *adj.* **hy·dro·lyze, hy·dro·lyse** (háidrəlaiz) *pres. part.* **hy·dro·lyz·ing, hy·dro·lys·ing** *past* and *past part.* **hy·dro·lyzed, hy·dro·lysed** *v.t.* to submit to hydrolysis ‖ *v.i.* to become hydrolyzed [fr. Gk *hudor*, water + *lysis*, a loosening]

hydromagnetics (haidroumægnétiks) *n.* study of phenomena in the motion of fluids conducting electricity in a magnetic field

hy·dro·me·chan·ics (háidroumәkæniks) *n.* the study of fluids and immersed solid bodies in motion and at rest

hy·dro·me·du·sa (haidroumidu:sə, haidroumidju:sə) *pl.* **hydromedusae** (haidroumidu:si:, haidroumidju:si:) *n.* a medusa budded from a hydroid, being the sexual generation of this hydrozoan. It produces polyps from eggs and sperm

hy·dro·mel (háidrəməl) *n.* a mixture of honey and water, becoming mead on fermentation [L. fr. Gk *hudromeli* fr. *hudōr*, water + *meli*, honey]

hydromechanical (haidroumikǽnikəl) *adj.* of or involving hydromechanics

hydrometallurgy (haidroumétələ:rdʒi:) *n.* the treatment of mineral ores by processes involving the use of water

hy·dro·me·te·or (háidroumi:ti:ər) *n.* any weather phenomenon produced by the condensation of moisture in the atmosphere (e.g. rain, hail, fog)

hy·drom·e·ter (haidrɔ́mitər) *n.* an instrument for measuring the specific gravity of a liquid, using the principle of flotation

hy·dro·met·ric (haidrəmétrik) *adj.* of hydrometry

hy·drom·e·try (haidrɔ́mitri:) *n.* the measurement of specific gravity, esp. of a liquid [fr. Mod. L. *hydrometria*]

hy·dro·nauts (háidrənɔts) *n.* U.S. Navy personnel engaged in undersea search and rescue missions. *Cf* AQUANAUT

hy·dron·ics (haidrɔ́niks) *n.* system of heating or cooling by circulation of a fluid in an enclosed system, e.g., hot water heating in a home. — **hydronic** *adj.* — **hydronically** *adv.*

hy·dro·path·ic (háidrəpæθik) *adj.* of or pertaining to hydropathy

hy·drop·a·thy (haidrɔ́pəθi:) *n.* the treatment of disease solely by means of water (used both internally and externally) [fr. HYDRO-, after 'allopathy', 'homeopathy']

hy·dro·phil·ic (haidrəfílik) *adj.* denoting a strong affinity for water [fr. Mod. L. *hydrophilus*]

hydrophobia (haidroufóubi:ə) *n.* aversion to water, esp. as a symptom of rabies ‖ rabies, esp. in man **hy·dro·phó·bic** *adj.* of or affected by hydrophobia ‖ (*chem.*) denoting a lack of affinity for water [L. fr. Gk *hudrophobia* fr. *hudōr*, water + *phobos*, fear]

hy·dro·phone (háidrəfoun) *n.* an instrument for detecting sound transmitted through water

hydrophyte (háidrəfait) *n.* an aquatic plant **hy·dro·phyt·ic** (haidrəfítik) *adj.* [fr. Gk *hudor*, water + *phuton*, plant]

hydroplane (háidrəplein) *n.* a light motorboat which, by means of hydrofoils, can rise partially or completely out of the water at high speed ‖ a seaplane

hydroplaning (háidrəpleiniŋ) *n.* skidding of a motor vehicle on a wet road

hy·dro·pon·ics (haidrəpɔ́niks) *n.* the growing of plants in water with essential chemicals in solution, instead of in soil [fr. Gk *hudor*, water + *ponos*, labor]

hydropsychotherapy (haidroupsaikəθérəpi:) *n.* (*psych.*) treatment of emotional disorders

hy·dro·scope (haidrəskoup) *n.* (*hist.*) a water [illegible] submerged in water [fr. Gk *hudroskopion*, water clock and *hudroskopos*, water seeker]

hy·dro·skim·mer (haidrəskimər) *n.* a vehicle that uses an air cushion for travel over water *Cf* AIR CUSHION VEHICLE, HOVERCRAFT

hy·dro·space (haidrəspeis) *n.* the land beneath the oceans *Cf* INNER SPACE

hy·dro·sphere (haidrəsfiər) *n.* the liquid part of the earth's surface, e.g. oceans, seas, lakes (cf. ATMOSPHERE, cf. LITHOSPHERE)

hy·dro·stat·ic (haidrəstætik) *adj.* of or pertaining to hydrostatics **hy·dro·stat·ics** *n.* the branch of hydromechanics that deals with characteristics (esp. the pressure) of fluids, and immersed solid bodies, at rest (cf. HYDRODYNAMICS) [alt. fr. Gk *hudor*, water + *statikos*, causing to stand]

hy·dro·tax·is (haidrətæksis) *n.* (*biol.*) the motion of an organism in response to the stimulus of moisture [Mod. L.]

hy·dro·ther·a·peu·tic (haidrouθerəpju:tik) *adj.* of or pertaining to hydrotherapy

hydrotherapy [illegible] of disease in which water is used externally, e.g. medicinal baths [fr. Gk *hudōr*, water + *therapeia*, healing]

hy·dro·ther·mal (haidrəθə:rməl) *adj.* relating to hot water, esp. (*geol.*) relating to the combined action of water and heat in effecting the metamorphosis of rocks [fr. Gk *hudōr*, wa[illegible]]

hydrothermal energy heat derived from underground steam

hydrotrope [illegible] detergent used to hold components in the solu[illegible]

hy·dro·trop·ic (haidrətropik) *adj.* (of roots) turning in response to the stimulus of water **hy·drot·ro·pism** (haidrɔtrəpizəm) *n.* this response [fr. Gk *hudor*, water + *tropos*, turning]

hy·drous (haidrəs) *adj.* containing water [fr. Gk *hudor*, water]

hy·drox·ide (haidrɔksaid) *n.* a chemical compound containing the hydroxyl (OH) group, and ionizing to liberate hydroxyl (OH−) ions

hy·drox·o·co·bal·a·min (haidrɔksoukoubæləmin) *n.* (*pharm.*) drug used in treating vitamin B_{12} deficiency in pernicious anemia; marketed as alphaRESIDOL

hydroxy [illegible]

hy·drox·y acid a carboxylic acid with one or more hydroxyl groups in the molecule

hy·drox·yl (haidrɔksil) *n.* the monovalent (OH) group or radical characteristic of hydroxides, alcohols, oxygen acids, etc. [fr. HYDROGEN + OXY[illegible]]

[illegible]

FAMINE

hy·drox·y·u·re·a (haidrɔksijuːriːə) *n.* [illegible] ($CH_4N_2O_2$) (*pharm.*) drug used in treating forms of leukemia, melanoma, and carcinoma

[illegible]

polyps and jellyfish, usually exhibiting alternation of generations [fr. Mod. L. *Hydrozoa* fr. HYDRA + Gk *zoon*, animal]

hy·e·na, hy·ae·na (hai:nə) *n.* a member of *Hyaenidae*, a family of nocturnal, carnivorous [illegible] strong teeth and well-developed forelimbs *Hyena crocuta* or *Crocuta crocuta*, a black-spotted species of S. Africa, utters laughterlike screams [L. *hyaena* fr. Gk]

hy·et·o·graph (haietəgræf, haietəgraf) *n.* a [illegible] *ad.* **hy·e·tog·ra·phy** (haitɔgrəfi) *n.* the study

hy·e·to·log·i·cal (haitəlɔdʒikəl) *adj.* of hyeto[illegible]

hy·e·tol·o·gy (haitɔlədʒi) *n.* the scientific study of natural precipitation [fr. Gk *huetos*, [illegible]

hy·e·tom·e·ter (haitɔmitər) *n.* a rain gauge [fr. [illegible]

[illegible]

the science of hygiene **hy·gien·ist** (haidʒi:nist

hy·gric (haigrik) *adj.* of, relating to or containing moisture [fr. Gk *hugros*, wet]

hy·gro·graph (haigrəgræf, haigrəgraf) *n.* an instrument which records changes in the humidity of the air [fr. Gk *hugros*, wet + *graphos*, written]

hygrometer [illegible] used in determining the relative humidity of the air **hy·gro·met·ric** (haigrəmetrik) *adj.* **hy·grom·e·try** (haigrɔmitri:) *n.* [fr. Gk *hugros*, [illegible]

hy·gro·phyte (haigrəfait) *n.* a plant which thrives in plentiful moisture **hygro·phyt·ic** (haigrəfitik) *adj.* [fr. Gk *hugros*, wet + *phuton*, plant]

hy·gro·scope (haigrəskoup) *n.* an instrument which shows variations in humidity **hy·gro·scop·ic** (haigrəskɔpik) *adj.* relating to substances which absorb and retain moisture [fr. Gk *hugros*, wet + *skopein*, to observe]

Hyk·sos (hiksɔs, hiksous) *pl. n.* Asian invaders who ruled Egypt between the 13th and 17th dynasties (c. 1785–c. 1570 B.C.)

hy·lo·zo·ism (hailəzouizəm) *n.* the doctrine that all matter is endowed with life [fr. Gk *hulē*, matter + *zōe*, life]

Hy·men (haimen) (*Gk* and *Rom. mythol.*) the god of marriage

hy·men (haimən) *n.* the thin fold of mucous membrane at the entrance to the vagina [Gk *humen* (*humenos*), membrane]

hy·me·ne·al (haiməni:əl) **1.** *adj.* of or pertaining to marriage **2.** *n.* a marriage song [fr. L. *hymenaeus*]

hy·me·nop·ter·an (haimənɔptərən) *n.* a member of *Hymenoptera*, an order of insects (e.g. bees, wasps, ants) having usually four membranous wings, chewing and sucking mouthparts and, in the female, an ovipositor. Metamorphosis is complete. They often display colonial social habits [fr. Mod. L. *Hymenoptera* fr. Gk fr. *humen* (*humenos*), membrane + *pteron*, wing]

hymenopteron [illegible] [illegible]

hy·me·nop·ter·ous (haimənɔptərəs) *adj.* being or having the characteristics of a hymenopteran ‖ of or pertaining to the order *Hymenoptera* [Mod. L. *hymenopterus*, having membranous wings]

Hy·met·tus (haimetəs) a mountain chain (rising to 3,369 ft) in Attica and Boeotia, Greece

hymn (him) **1.** *n.* a song or ode in praise, adoration or supplication of God, esp. one sung at a religious service **2.** *v.t.* (*rhet.*) to praise or supplicate in a hymn ‖ *v.i.* (*rhet.*) to sing a hymn [O.E. *ymen* fr. L. *hymnus* fr. Gk]

hym·nal (himnəl) *n.* a book containing a collection of hymns [fr. L. *hymnus*, a hymn]

hymn·book (himbuk) *n.* a hymnal

hymnedist [illegible] **hymnody** (himnədi) *n.* the singing of the composition of hymns ‖ the study of hymns (*collect.*) hymns [fr. M.L. *hymnodia* fr. Gk]

hym·nol·o·gist (himnɔlədʒist) *n.* someone who studies or composes hymns [HYMNOLOGY]

hymnology [illegible] the composition of hymns ‖ (*collect.*) hymns [fr. HYMN + Gk *logos*, word]

hy·oid (haiɔid) **1.** *adj.* of a bone at the base of the tongue, shaped like the Greek letter *u* **2.** *n.* this bone [fr. F *hyoïde* fr. L. fr. Gk *huoeidēs*, shaped like the upsilon]

hy·pae·thral (haipi:θrəl, hipi:θrəl) *adj.* (*archit.*) e.g. of some classical temples or sanctuaries) not having a roof [fr. L. *hypaethrus* fr. Gk

hype [illegible] ception that creates great popular enthusiasm for a person or product; from hypodermic needle —**hype** *v.* —**hyped** *adj.*

hyper- *prefix* excessive, overmuch, above [fr. Gk *huper-* fr. *huper* prep. and adv., over, be[illegible]]

hyperacidity [illegible] acidity

hyperaemia HYPEREMIA

hyperesthesia [illegible]

hy·per·al·ge·si·a (haipərældʒi:ziə) *n.* abnormally acute sensitivity to pain **hy·per·al·ge·sic** *adj.* [Mod. L.]

hy·per·bar·ic (haipərbærik) *adj.* of oxygen used under pressure greater than one atmosphere

hy·per·bo·la (haipə:rbələ) *pl.* **hy·per·bo·las, hy·per·bo·lae** (haipə:rbəli:) *n.* a plane curve that is the locus of points whose distance from a fixed point (the focus) divided by its distance from a fixed line (the directrix) is a positive constant greater than 1 (cf. PARABOLA). A hyperbola is formed by the section of a right circular cone by a plane cutting the cone at an angle at the base greater than the angle formed by the cone's side with its base [Mod. L. fr. Gk *hyperbolē*, excess, exaggeration]

hy·per·bo·le (haipə:rbəli:) *n.* a figure of speech which greatly exaggerates the truth [fr. Gk *huperbolē*, excess, exaggeration]

hy·per·bol·ic (haipərbɔlik) *adj.* of hyperbole ‖ of a hyperbola **hy·per·bol·i·cal** *adj.* [fr. Gk *huperbolikos*, excessive]

hy·per·bo·loid (haipə:rbɔlɔid) *n.* a surface that when cut by planes parallel to one coordinate plane gives elliptical sections and when cut by the other two coordinate planes gives hyperbolic sections, providing the axes are properly oriented [HYPERBOLA]

hy·per·charge strangeness (haipərtʃɔrdʒ) (*nuclear phys.*) a quantum representing a delay in interaction between some elementary particles

hy·per·crit·i·cal (haipərkritik'l) *adj.* too critical, esp. of trivial faults

hy·per·du·li·a (haipərduli:ə, haipərdjuli:ə) *n.* (*Roman Catholicism*) the veneration of the Virgin Mary as superior to the saints (*DULIA, *LATRIA)

hy·per·e·mi·a, hy·per·ae·mi·a (haipəri:mjə) *n.* congestion of the blood **hy·per·é·mic, hy·per·æ·mic** *adj.* [Mod. L.]

hy·per·es·the·si·a, hy·per·aes·the·sia (haipəri:sθi:ʒə) *n.* excessive sensitivity to pain or other forms of sensation [Mod. L.]

hy·per·eu·tec·tic (haipərjutéktik) *adj.* containing a component in excess of the eutectic composition

hy·per·fo·cal distance (haipərfóuk'l) the nearest distance at which a lens may be focused while giving a satisfactory definition for the image of a very distant object

hy·per·gly·ce·mi·a, hy·per·gly·cae·mi·a (haipərglaisi:mi:ə) *n.* an excess of sugar in the blood [HYPER- + *glycemia*, presence of glucose]

hy·per·gol·ic fuel (haipərgɔlik) fuel that will ignite spontaneously with an oxidizer, used as the propulsion agent in certain missile systems, e.g., aniline with fuming nitric acid

hy·per·in·fla·tion (haipərinfléiʃən) *n.* extreme (doubling or tripling), persistent, daily rise in prices destroying the value of money as an exchange medium, e.g., in Germany, 1923

hy·per·lip·id·e·mi·a (haipərlipədi:mi:ə) *n.* (*med.*) a condition of more than normal lipids (fats) in the blood. *also* hyperlipemia

hy·per·mar·ket (haipərmɑrkit) *n.* (*Br.*) assemblage of small shops under a single roof, often in the suburbs, and usu. with a common theme, e.g., antiques; in U.S., a center, e.g., an antique center

hy·per·me·ter (haipə:rmitər) *n.* a line of poetry having a redundant syllable **hy·per·met·ric** (haipərmétrik), **hy·per·mét·ri·cal** *adjs* [fr. Gk *hupermetros*, beyond measure]

hy·per·me·tro·pi·a (haipərmitróupi:ə) *n.* inability to see near objects distinctly owing to a condition of the eye in which light from such objects is brought to focus behind the retina **hy·per·me·trop·ic** (haipərmitrɔpik) *adj.* [Mod. L.]

hy·per·on (haipərɔn) *n.* (*phys.*) a baryon other than the proton or neutron [HYPER- + *-on*, fundamental particle]

hy·per·o·pi·a (haipəroupi:ə) *n.* hypermetropia **hy·per·op·ic** (haipərɔpik) *adj.* [HYPER- + Gk *ops* eye]

hy·per·pha·gi·a (haipərféidʒi:ə) *n.* (*med.*) an excessive, sometimes insatiable appetite, symptom of diabetes, seen in some psychoses. —**hyperphagic** *adj.* [illegible]

Ib·sen (ibsən), Henrik Johan (1828–1906), Norwegian dramatist. 'Brand' (1866) and 'Peer Gynt' (1867) were his first real successes and the last of his verse plays. His later works, e.g. 'A Doll's House' (1879), 'Ghosts' (1881), 'The Wild Duck' (1884), 'Rosmersholm' (1886) and 'Hedda Gabler' (1890), deal with social problems, while the last plays 'The Master Builder' (1892), 'John Gabriel Borkman' (1896), 'When We Dead Awaken' (1899) etc., are more obviously symbolic. However, in all the prose plays the realistic surface action is symbolic of some deeper psychological situation and serves to reveal the complexities of powerful but often tragically marred characters. Ibsen's realism, and also his practice of using a central symbol to throw light on the action, immensely influenced modern dramatists

Ice·land (aɪslənd) an island republic (area 39,758 sq miles, pop 232,000) in the N Atlantic. Capital: Reykjavik. Language: Icelandic. Religion: Lutheran 30% of the land consists of glaciers, snowfields (including Vatnajokull, [illegible]). There are over 100 volcanoes and many geysers. Highest peak: Hvannadalshnutur 6,950 ft. Average temperature [illegible] on the south and east coasts, 50 ins in the southwest plains, 10–20 ins in the north. Earthquakes are frequent. Livestock: sheep, cattle, horses. Crops: hay, potatoes, turnips. Chief occupation: processing. Exports: fish, fish oils, sheepskins. Imports: fuel oil and gasoline, ships, wood, cereals, foodstuffs. University: Reykjavik (1911). Monetary unit: krona. HISTORY. The island was settled (870–930) by Norse and Irish immigrants, who established (930) a legislative assembly, the Althing. In the age of the sagas, the Icelanders settled Greenland and visited North America (10th c.). Christianity was introduced (11th c.) and the Church gained considerable power (12th c.). Feudal disputes (1262–4) ended in submission to Norway. Royal and Church power increased at the expense of the Althing, and Iceland passed (1380) to Denmark. Natural calamities and a Danish trade monopoly (1602–1787) caused a decline which ended only with the reform of the Althing (1843), the establishment of free trade (1854) and the grant of a constitution (1874). Independence was obtained (1918). Because of its strategic position, Iceland was occupied by the British (1940), who were replaced by the Americans (1941). A republic was established (June 17, 1944). Iceland joined the U.N. (1946) and NATO (1949), and the U.S.A. took over the country's defense (1951). Iceland extended (1958) her coastal fisheries from 4 to 12 nautical miles. Vigdis Finnbogadottir became Iceland's first woman president (1980).

Ice·lan·dic (aɪslændɪk) **1.** *adj.* pertaining to Iceland **2.** *n.* the Icelandic language. Icelandic is spoken by the population of Iceland and by a few people in North America. It belongs, with Norwegian, Danish and Swedish, to the northern branch of the Germanic group of Indo-European languages. Old Icelandic and Old Norse differ only in minor features. During the period of classical Old Icelandic (1150-1350) the sagas, formerly a part of oral tradition, were written down. The use of Latin by the clergy was responsible for the introduction of many Latin borrowings and loan translations during the period 1350-1530, but most of these were later eliminated. The translation of the New Testament (1540) marked the beginning of Modern Icelandic. The number of German loanwords was high because of the influence of Luther's version of the New Testament

—In the ancient world, vast empires were built up by Babylonia, Assyria, Egypt, Persia, Greece and Rome, and in the Middle Ages by the Byzantines and the Ottomans. Imperialism is usually taken to refer, however, to later forms of empire building which followed the [illegible] nies were acquired (mid-15th c. late 18th c.) by Spain, Portugal, France, England and the Netherlands for commercial and religious motives. This movement was helped by the formation of trading companies (17th c.) and by [illegible] sulted in colonial wars (17th and 18th cc.). The Revolutionary War (1775–83) and the rise of laissez-faire economic theories lessened the appeal of colonialism (early 19th c.). Interest in imperialism revived sharply (late 19th c.) in Britain, the U.S.A., France, Germany, Belgium, Italy, Russia and Japan. The ensuing scramble for Africa, the Middle East and the Far East was inspired by the need to find raw materials and markets for protectionist industries, as well as by missionary and other ideals. SYMBOLISM) [F *impressionisme*] —Impressionism was a term first used sarcastically in 1874 by a critic referring to a Monet landscape, *'Impression, soleil levant'*. Later it was used to describe the work of a group of artists—chiefly Manet, Monet, Renoir, Pissarro, Cézanne and Degas—who revolted against the official conservatism of the French Salon. They determined to paint things as they appeared to the painter at the moment, not as they are commonly thought or known to be. The movement coincided with scientific analysis of the nature of light diffraction and diffusion and with the development of photography. These discoveries enabled the painters to create new, more natural ways of rendering light effects by making use of natural and optical phenomena. To this extent the technique was analytical. The practical result, in the paintings, was a liberation: palettes became brilliant, as love of the open air and a feeling of immediacy and spontaneity transformed art. Certain earlier painters (e.g. Constable and Turner, who was obsessed with the free rendering of effects of refracted light) were recognized as precursors. Impressionism, concerning itself with immediacy and the effect of light on surfaces, was always liable to seem insubstantial. Without sacrificing the open-air feeling and the practical knowledge of the ways of light and the eye, certain painters— notably Cézanne—wished also to give a sense of solidity, relationship in space, structure, weight and permanence. The discoveries of Impressionism were subordinated to this new attempt to render other relationships. The more solid Postimpressionist art, concerned with the geometry of form, led to cubism. The painter who especially links Impressionism with Postimpressionism is Seurat

—Four main strains may be distinguished among the Indian peoples: the Dravidian, the Vedda, the Aryan (or Indo-Afghan) and the Mongoloid. The first two are regarded as aboriginal and are found in greatest concentration in S. India and the Deccan. The last two are thought to be invaders: the Aryans (Caucasians) are found purest in Pakistan and N. India, the Mongoloid esp. in the Himalayas and Assam

India a republic (area 1,261,597 sq. miles, pop. 683,997,512) and member of the British Commonwealth in S. Asia. Capital: New Delhi. Largest cities: Calcutta, Bombay, Madras. Union territories: the Andaman, Nicobar, Laccadive, Minicoy and Amindivi Islands. People: 'INDIA (subcontinent). The Aryans invaded the Punjab (c 1500 BC) and spread through N India to Bengal (c 800 BC), displacing the Dravidian inhabitants The Aryan religion, based on the Vedas, became incorporated in Brahmanism (c 1000 BC), Jainism and Buddhism (6th c B C) Alexander the Great invaded the Punjab (327 BC), but the Greeks were driven out by Chandragupta, the founder of the Maurya Empire (325–184 BC). Hinduism was the state religion until the reign (c 273 BC–c 232 BC) of Asoka, who replaced it by Buddhism On his death, the Maurya Empire, which now included most of the subcontinent, began to disintegrate N India was invaded and ruled by the Greeks (2nd c BC), and the Parthians (1st c BC–1st c AD). The Gupta dynasty (c 320–c 544) created a new empire in N India, but failed to gain control of the south [illegible] this period The Hun invasion (6th c) and the internecine warfare of the Rajputs weakened [illegible] west by Turks and Persians (1001–26) under Mahmud of Ghazni The Delhi sultanate (1206–1526) conquered most of the Hindu states except Kashmir, but was weakened when Timur captured Delhi (1398) It was replaced in the north by separate Moslem kingdoms, which were subdued (1526) by Babur, the founder of the Mogul Empire (1526–1707) During the reign (1556–1605) of Akbar, Mogul power was extended to most of northern and central India and the administration of the empire was reformed Mogul architecture reached its height under the rule (1627–58) of Shah Jahan, but the empire began to disintegrate after the reign (1658–1707) of Aurangzeb

European interest in India began with Vasco [illegible] British East India Company established trading posts at Surat (1612), Bombay (1661) and Calcutta (1690), driving off Portuguese and Dutch opposition With the decline of the Mogul empire, and the emergence of the Marathas, the British and French tried to extend their influ- [illegible] the expulsion of the French by the military victories of Clive The British raj was extended by Warren Hastings, and by 1850 covered the whole of India After the Indian Mutiny (1857), [illegible] led to the formation of the Indian National Congress (1885) and the Moslem League (1906). After the 1st world war, the Government of [illegible] elected officials Gandhi led a policy of passive resistance to British rule Provincial legislatures were set up by the Government of India [illegible] leaders on a formula for a transfer of power, and [illegible] the end of the 2nd world war a policy of partition was agreed on On Aug. 15, 1947, the country was partitioned to form the two new [illegible] of India and Pakistan The princely states (more than 500 in number) which had political agreements with British India, were allowed to join either India or Pakistan. The partition was marked by great bloodshed and there was a huge refugee problem Hyderabad, the largest of the princely states, joined India (1949) but Kashmir, having borders with both India and Pakistan, presented a problem In the end the maharaja opted to join India, but Pakistan contested the decision and a bitter dispute followed, leading to U.N. intervention. Kashmir was formally admitted to the Indian Union (1957), but parts of its western mountainous regions continued to be controlled by Pakistan

Under the constitution of the Republic of India (Jan 26, 1950), India is a union of states, each with its own governor and legislative assembly. The Congress party under Nehru created (1949–56) a strong central government By 1956, the former French territories had been incorporated in the republic The Portuguese possession of Goa was invaded (1961) and annexed (1962). Overpopulation and frontier disputes with China on the northwest and northeast borders have strained India's economy The long-standing dispute with Pakistan over Kashmir broke briefly into open war (1965) Shortly after signing an agreement at Tashkent with Pakistan to restore normal relations between the two countries, Shastri, the prime minister, died, and was succeeded by Indira Gandhi in 1966. Her first 11 years in office saw many improvements in agriculture, irrigation, and power production; sources of natural gas and oil were discovered; and many industries were nationalized. In 1974, India entered the nuclear age with the explosion of its first nuclear device. India helped establish Bangladesh as an independent state in 1971, and in 1975 Sikkim became an Indian state Economic and social problems continued, however, and mounting political opposition along with a rash of strikes and riots persuaded Gandhi to declare a state of emergency in 1975, during which time many political opponents were jailed and constitutional rights suspended In March 1977 the emergency was lifted, and after elections were held Gandhi resigned in favor of an opposition coalition This coalition did not hold together, however, and Gandhi returned to office in a caretaker government; she was reelected in 1980. Sikh opposition forces became violently active in the early 1980s. The government attempted in June 1984 to put down a violent Sikh separatist movement in Amritsar, and in October Gandhi was assassinated by Sikh members of her security guard She was succeeded as prime minister by her son Rajiv Gandhi, and his party won an overwhelming victory in the December 1984 elections. Industrial Revolution the mechanization of industry and the consequent changes in social and economic organization, esp. in Britain in the 18th and early 19th cc.) The change from domestic industry to the factory system began in the textile industry, which was transformed by such inventions as Kay's flying shuttle (1733), Hargreaves's spinning jenny (1764), Arkwright's water frame (1769), Crompton's mule (1779) and Cartwright's power loom (1785). Newcomen's steam engine (1705), perfected (1765) by Watt, provided a power supply. Iron-making was improved when Darby used coke to smelt ore (c. 1709), and when Huntsman's crucible process (c. 1750) and Cort's puddling furnace [illegible] production became possible with Bessemer's converter (1856) and the Siemens-Martin open-hearth process (1866). Communications were improved by the canals of Bridgewater and Brindley, the roads of Telford and Macadam, the locomotives of Stephenson, and the railroad engineering of Brunel. The 18th-c. improvements in agricultural method, led by Tull, Townshend and Bakewell, freed rural labor for industry and increased the productivity of the land. The rapid growth of towns, mostly near coalfields, gave rise to bad working and housing conditions, which inspired Luddite riots, trade unionism and Chartism. Economic thought was transformed by the laissez-faire theories of Adam Smith, Ricardo and Malthus. After 1830 similar industrial revolutions took place in France and Belgium, followed by Germany (after 1850), the U.S.A. (after 1860), Japan (after 1870) and Russia (after 1900). India and China are undergoing industrial revolutions now

Ire•land (aiərlənd) an island (area 31,840 sq. miles) of the British Isles, to the west of Great Britain, divided into the Irish Republic and Northern Ireland. HISTORY: Settled by Celts (c. 500 B.C.), Ireland became divided into the rival kingdoms of Meath, Ulster, Leinster, Munster and Connacht. Christianity was introduced (432) by St. Patrick, and Ireland became a leading cultural center of Europe (6th–9th cc.). Norse invasions (795–1014) were halted (1014) by Brian Boru, but Ireland was still split in warring kingdoms when the English invasion began (1170) under Pembroke. The invaders soon mingled with the Irish and by the early 15th c. only the Pale remained under direct English rule. Henry VII attempted to bring Ireland under English jurisdiction by means of Poynings' Law (1495). Opposition to English rule increased when the Penal Laws attempted to impose Protestantism, and the political struggle became merged in conflict between Catholics and Protestants. Rebellions in the reign of Elizabeth I were put down brutally, and Protestant Scots were settled in Ulster. Another rebellion (1641–52) was put down by Cromwell with great loss of life, and was followed by a thorough Protestant settlement. The Irish supported James II in his unsuccessful attempt to retain the throne and were defeated by William III at the Boyne (1690). Absentee landlordism worsened the already bad economic conditions. Grattan and the Irish volunteer army obtained an independent parliament (1782). Continued Irish unrest and Wolfe Tone's rebellion (1798) led to the Act of Union (1800) and Irish representation in the British Parliament. O'Connell's agitation resulted in the granting of Catholic Emancipation (1829). The potato famine (1845–9) decimated the population and caused mass emigration. The Fenians forced Gladstone to disestablish the Irish Church (1869) and to pass the Irish Land Act (1870), giving security of tenure to Irish tenants. The campaign of Parnell and Davitt led to the Irish Land Act (1881), which guaranteed fair rents, and to unsuccessful attempts to pass Home Rule bills (1886 and 1893). With civil war imminent in Ireland, a Home Rule Act was passed (1914) despite Conservative opposition, but its application was delayed until after the 1st world war. The Easter rebellion (1916) was put down, but guerrilla warfare ensued. The brutality of the Black and Tans caused widespread hostility to the English, and Sinn Fein won an electoral victory (1918). The Home Rule Act (1920) incorporated the northeast in the United Kingdom of Great Britain and Northern Ireland. The negotiations of Griffith and Collins incorporated the rest of Ireland in the Irish Free State (1921), with dominion status. (For subsequent history *NORTHERN IRELAND, *IRISH REPUBLIC)

Ports: Ashdod, Haifa, Eilat. Universities: Jerusalem, Tel Aviv, Ramat Gan. Monetary unit: Israeli pound (100 agorot). HISTORY (For history up to 1948 *PALESTINE) Israel declared itself an independent republic (May 14, 1948), on the day that the British mandate over Palestine ended, and a government was formed with Weizmann as president and Ben Gurion as prime minister (1948). The country was invaded by the Arab League, and the U.N. imposed a cease-fire (1948). An armistice was concluded (1949) between Israel and her Arab neighbors, but border incidents continued throughout the 1950s. Israel passed a law (1950) giving every Jew the right to immigrate to Israel, and the population doubled between 1948 and 1959. After clashes in the Gaza Strip (1955–6), Egypt refused Israeli ships the right of passage through the Suez Canal (1956). Israel, with British and French support, invaded Sinai and the Gaza Strip, but was forced by the U.N. to withdraw (1957). Israel received (1952–65) reparations from Germany for Nazi attempts to exterminate the Jews during the 2nd world war. The plan to divert the waters of the River Jordan in order to irrigate the Negev caused further incidents with Syria and Jordan (1960s). Arab countermeasures to divert the headwaters of the Jordan, and frontier raids into Israel and the Israeli counterraids, were further threats to peace. A third Israeli-Arab war broke out on June 5, 1967. After one week of fighting on three fronts (Sinai, Jordan and Syria) Israel extended its frontiers to control by force of arms the west bank of the Jordan, the east bank of the Suez Canal and the Sinai peninsula, and annexed the Jordanian part of Jerusalem. In the Yom Kippur War (1973) Israel defended itself against a surprise Arab attack. A right-wing government under prime minister Menachem Begin took power in 1977 and signed a peace treaty with Egypt in 1979. However, in 1980 Begin proclaimed all of Jerusalem as Israel's capital city, and Israel continued to settle the West Bank. Israel invaded Lebanon in 1982 to rout PLO guerrillas there. In September 1984 a Labor-Likud coalition, led by prime minister Peres, took office and began withdrawing Israeli troops from Lebanon. In 1985 Peres made peace overtures to Jordan.

Italian Wars the struggle (1494–1559) between France and Spain for control of Italy. In the first part (up to 1515), Charles VIII, Louis XII and François I of France fought Aragon and the papacy for control of Naples and Milan, while the Italian towns changed sides to suit their own interests. François I renewed the war (1521) against the Emperor Charles V, but France was forced to abandon her claims to Italy in the Treaty of Cateau-Cambrésis (1559)

It·a·ly (ɪtlɪ) a republic (area incl. Sicily and Sardinia 116,280 sq. miles, pop. 53,656,000) in S. Europe. Capital: Rome. Language: Italian with a small German minority in Trentino-Alto Adige. Religion: Roman Catholic (official), with 100,000 Protestants, 50,000 Jews. The land is 50% arable, 20% pasture and grazing, 18% forest (mainly beech, chestnut, oak). The Alps (Monte Rosa, 15,217 ft, Gran Paradiso, 13,324 ft) cross the north in an arc from the Riviera to Yugoslavia, broken by large lakes (Como, Maggiore, Garda) and river valleys. They drop to the N. Italian plain (Po valley), which widens to the lagoon region of the Po delta. The Apennines (few peaks over 5,000 ft), which form the backbone of peninsular Italy, are broken by river valleys (notably those of the Arno and Tiber) and plateaux. They are highest in the east (9,560 ft in the Gran Sasso massif, Abruzzi e Molise). The only large plains are those of Campania (west) and Apulia (east). Average temperatures (F.) in Jan. and Jul.: Alps under 30° and 45°, Milan 34° and 75°, Rome 50° and 77°, Calabria 64° and 80°. Rainfall: W. Alps 60 ins, E. Alps over 80 ins, E. Po valley, Tuscany and Latium 20 ins, Apulia, S. Sicily and Sardinia under 20 ins. Livestock: sheep, cattle, goats, hogs, horses, donkeys, mules. Crops: wheat, rice, other cereals, citrus and other fruit, olives, vines, nuts, root vegetables, market [illegible] mercury, pyrites, iron ore, manganese, lead and [illegible] industries: textiles (cotton, silk, wool and man-made fibers), engineering, clothing, chemicals, wood products, iron and steel, vehicles, alumi[illegible] refining, electricity, ships, tourism. Exports: textiles, fruit, vegetables, wine, vehicles, chemicals, footwear. Imports: crude oil, coal, corn, machinery, coffee, meat, rubber, metals, wood. Ports: Genoa, Venice, Naples, Trieste. There are 28 universities, the oldest being Bologna (1200), Padua (1222) and Naples (1224). Monetary unit: lira (100 centesimi = 1 lira). Prehistoric Italy was inhabited by Ligurian and Illyrian peoples. The Etruscans settled in the north, and the Greeks colonized the south (8th c. BC). The Gauls penetrated central Italy (5th c. BC) but by the mid-4th c. BC the peninsula was dominated by Rome. By 272 BC the Romans had united Italy, and by 146 BC had colonized the Mediterranean and conquered Greece. The Roman Empire replaced (31 BC) the republic, began to decline economically (2nd c. AD) and was divided (395) into the Byzantine Empire and the Western Roman Empire. The latter fell (476) to Odoacer, who was himself conquered (493) by the Ostrogoths. Justinian I retook (552) Italy for the Byzantine Empire, but had to cede the north (568) to the Lombards, who gained power while the empire was weakened by iconoclasm (8th c.). Pepin II, king of the Franks, intervened (754) in favor of the papacy, and his son Charlemagne defeated the Lombards and took the titles of king of Lombardy (774) and Emperor (800). Saracen invasions of the south and Sicily (9th c.) and the collapse (843) of the Frankish empire led to a period of confusion which ended (962) when Otto I united the crowns of Germany and Italy in the Holy Roman Empire. The Normans conquered (11th c.) Apulia, Calabria and Sicily. The Investiture Controversy (1075–1122) alienated Emperors and popes, and semi-independent city-states arose in northern and central Italy. Frederick I's attempt to restore imperial power was defeated (1176) by the Lombard League, and he made peace with the papacy (1177), the city-states (1183) and the Normans (1186). The Italian cities took sides in the struggle between Guelphs and Ghibellines, which further weakened the empire and allowed Innocent III to reassert papal power (1198–1216). The papacy waned, however, during the captivity (1309–77) at Avignon. The house of Anjou gained power (1266) in Sicily, but was expelled in the revolt of the Sicilian Vespers (1282) and was replaced by the house of Aragon. Sporadic fighting reduced the multiplicity of small states to five main ones by the end of the 15th c.: the duchy of Milan, the republics of Florence and Venice, the Papal States and the kingdom of Naples. Economically prosperous under such families as the Visconti of Milan and the Medici of Florence, the states fostered the arts and played a leading part in the Renaissance. The ruinous Italian Wars began (1494) with a French invasion under Charles VIII, but the Spaniards gained control when the emperor Charles V was crowned (1530) king of Italy. France abandoned to Spain her pretensions in Italy by the treaty of Cateau-Cambresis (1559). Spain and the Counter-Reformation dominated Italy until the War of the Spanish Succession (1701–14), after which Austria gained Milan and Naples (1713) and Sicily (1720). Sardinia gained Savoy (1720) and, after the War of the Austrian Succession (1740–8), part of Milan. Tuscany passed to the Hapsburgs and Sicily to the Spanish Bourbons (1734). Napoleon invaded northern Italy (1796), set up the Cisalpine Republic (1797) and proclaimed himself king of Italy (1804), extending French control over the whole peninsula by 1810. The Congress of Vienna (1815) restored Sardinia to the house of Savoy, and the rest of Italy to Austrian influence. The reactionary policies of Metternich led to the formation of secret societies such as the Carbonari, and a movement for independence. The Risorgimento After [illegible] revolutions in Naples (1820) and Piedmont (1821), Mazzini founded (1831) the 'Young Italy' movement with a united republic as its aim. Revolutions were widespread in 1848, but the republic established in Rome by Mazzini and Garibaldi was quickly overthrown by a French army. Charles Albert of Sardinia declared war on Austria (1848) but was heavily defeated at Novara (1849). His son Victor Emmanuel II chose as prime minister Cavour, who obtained the support of Napoleon III in another war (1859) against Austria. Victories at Magenta and Solferino (1859) gave Lombardy to Sardinia. Tuscany, Modena, Parma, Bologna and the Romagna voted (1860)

to join Sardinia. Garibaldi led (1860) an expedition to Sicily, which also joined Sardinia, together with Naples. Victor Emmanuel II was proclaimed (Mar. 17, 1861) king of Italy. Venice was acquired after the Seven Weeks' War (1866) and Rome during the Franco-Prussian War (1870–1). Rome became the capital of Italy (1871), but the papacy refused to recognize the loss of its temporal power until 1929, when it was given sovereignty over Vatican City. The [illegible] join Germany and Austria in the Triple Alliance (1882). Italian colonization, which began (1882–90) in Eritrea and Italian Somaliland, was stopped (1896) by the Ethiopians. Italy entered (1915) the 1st world war on the side of the [illegible]. Rijeka was seized (1919) and annexed (1924). The Fascists marched on Rome (1922), formed a government under Mussolini, and organized (1926) a totalitarian state. Italy conquered Ethiopia (1935–6). The Rome-Berlin Axis was formed (1936) with Nazi Germany, and Italy intervened (1936) on behalf of Franco in the Spanish Civil War. Mussolini seized (1939) Albania, and entered (1940) the 2nd world war on the side of Germany. Heavy defeats and social unrest brought about Mussolini's fall (1943). His successor, Badoglio, made peace with the Allies and declared war on Germany (1943). After the liberation (1945), the monarchy was replaced (1946) by a republic. By the peace treaty (1947), Italy lost Istria to Yugoslavia, and her African colonies became independent. Italy retained the trusteeship for Italian Somaliland until 1960. Italy received American aid under the Marshall Plan (1947), and joined NATO (1949) and the E.E.C. (1958). The dispute with Yugoslavia over Trieste was settled (1954), and the economy largely restored. The Christian Democrats, the leading party since the war, have been increasingly challenged by a growing Communist party, which won ⅓ of the votes in the 1970s and had a strong local following. Led by Enrico Berlinguer, the Communists espoused Euro-Communism which advocates independence of the Soviets. Labor unrest, government scandals, and extremists' terror tactics disrupted Italy's politics. Coalition governments, consisting of Christian Democrats, Socialists, and Republicans, continued to lead until 1981 when Spadolini, a Republi[illegible] succeeded in 1983 by Socialist Craxi, who resigned in 1985 but later returned to office.
